

The Correct Response to Traffic Accidents

Calm... Securing the Scene... and Requesting Help

"The correct response after an accident begins with staying calm, securing the area, protecting people, and requesting help from the competent authorities"

Why Do We Care About the Correct Response at Accidents?

A wrong response after an accident can double the danger

Protecting Lives

After the Accident
Occurs

Reducing Collisions

Additional Ones at the
Site

Facilitating the Arrival

of the Competent
Authorities

Preventing Crowding

or Wrong Stopping

A Calm Response

for the Driver and
Passengers

A Culture of Responsibility

Mindful Traffic
Responsibility

Remember: Staying calm in the first minute after the accident helps you make the right decision

The First Rule After an Accident

The priority is people's safety, not vehicles or property

Protect yourself first

Protect the passengers and those around you

Move away from the path of vehicles

Turn on the hazard signals

Request help when needed

Wait for the competent authorities

Note: Don't act hastily or emotionally — quick, ill-considered decisions can increase the danger

Stopping Safely After a Minor Accident

If the vehicle is drivable and there are no injuries

Turn on the hazard signals immediately

Move the vehicle to a safe place

Don't stand in the middle of the road

Don't stand in front of oncoming vehicles

Check the passengers' safety

Contact the competent authorities

Message: Moving the vehicle off the road prevents disrupting traffic and reduces the risk of further accidents

What to Do When There Are Injuries or Danger

Treat the situation as an emergency

State the location clearly to the competent authorities

5

Don't move the injured person unless there's an immediate danger

6

Wait for the response teams and follow the instructions

7

Turn on the hazard signals if possible

1

Move away from the path of vehicles

2

Evacuate passengers to a safe place

3

Call emergency services on 999

4

Important Note: Your safety and the safety of those present are more important than trying to check or repair the vehicle

Securing the Accident Site

Securing it alerts other drivers and reduces further accidents

**Turn on the
hazard signals**

**Using the
warning
triangle**

**Move away
from the path
of vehicles**

**Standing
behind barriers**

**Don't stand
between two
vehicles**

**Keep
passengers
away from the
vehicle**

Message: Don't put yourself in danger while trying to secure the site — personal safety is the priority

Calling Emergency Services

Accurate information helps emergency teams arrive quickly

Information to Provide to Emergency Services:

"Accident location • Number of vehicles • Presence of injuries • Smoke or leak • Nearest landmark"

State the location precisely

The number of vehicles involved

The presence of injuries

A risk of smoke or fire

Emergency Number: Call 999 when there's an emergency or a danger to lives

Handling Passengers After the Accident

Organizing passengers' exit safely

**Ask for calm
and no random
exiting**

**Exit from the
safe side**

**Keep children
and the elderly
away**

**Gather
passengers in
a safe place**

**No one returns
to the vehicle**

**Wait for the
competent
authorities**

Message: Evacuating passengers doesn't mean standing near the vehicle, but moving to a safe place

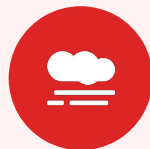

When Should You Not Move the Vehicle?

Situations where moving the vehicle is unsafe or inappropriate

The presence of injuries or an immediate danger

Signs of smoke, fire, or a leak

The vehicle in an unstable position

Moving it increases the danger

The competent authorities asking you not to move it

You can't move it safely

Note: In dangerous cases, don't try to repair or move the vehicle yourself — wait for the competent authorities

Don't Move the Injured Person Except When Necessary

Act carefully and avoid random actions

Don't move the injured person unless there's an immediate danger

Call emergency services immediately

Stay nearby if it's safe

Reassure the injured person and wait for the specialists

Don't perform interventions you're not trained in

Keep onlookers away from the site

Important Message: Proper help begins by calling the competent authorities and not exposing the injured person to further danger

The Risks of Crowding at Accidents

Wrong behaviors that can hinder the response and increase risks

Obstructing the arrival of emergency vehicles

Increasing congestion at the site

Exposing onlookers to accidents

Distracting drivers

Violating the privacy of those affected

Hindering the competent authorities

Correct Action: Move away from the site if you're not involved, and leave room for the competent authorities

Filming and Posting Accidents

A behavior that harms the privacy of those affected and hinders the correct response

Filming the injured or those affected

Posting photos or clips of the accident

Stopping to film on the road

Approaching just to watch

Disrupting traffic out of curiosity

Awareness Message: At accidents, your role is safety and requesting help, not filming or posting

What to Do When There's Smoke or a Risk of Fire

Increase the level of caution when smoke or a burning smell appears

Move away from the vehicle immediately

1

Evacuate passengers to a safe place

2

Don't open the engine hood

3

Don't approach a leak or heat

4

Don't allow others to approach

5

Call emergency services on 999

6

The extinguisher is for a small fire only

7

Important Note: Don't put yourself in danger trying to save the vehicle or property

Accidents on Highways

Vehicle speed and the difficulty of sudden stopping increase the danger

**Move away
from the
vehicle to a
safe area**

**Don't stand
behind or
beside the
vehicle**

**Turn on the
hazard signals**

**Don't repair
the vehicle in a
dangerous
spot**

**Call for
roadside
assistance**

**Wear the
reflective vest**

Important Message: On highways, moving away from the path of vehicles is more important than checking the damage

Accidents in Tunnels or Enclosed Parking

Limited space and ventilation call for caution

Use the emergency exits

5

Don't obstruct the emergency passages

6

Call and state the location precisely

7

Turn on the hazard signals

1

Stop the vehicle in a way that doesn't increase the danger

2

Follow the guidance signs

3

Move away from the vehicle when there's danger

4

Note: In enclosed spaces, smoke or leaks can increase the danger — request help immediately

Do's and Don'ts at Traffic Accidents

Correct Practices and Others to Avoid

Don't ✗

- Don't stand in the middle of the road ❶
- Don't crowd around the accident ❷
- Don't move the injured person except when necessary ❸
- Don't film or post the accident ❹
- Don't return to a vehicle with smoke ❺
- Don't repair the vehicle in a dangerous spot ❻
- Don't obstruct the arrival of emergency vehicles ❼

Do ✓

- Stay calm after the accident ❶
- Turn on the hazard signals ❷
- Move away from the path of vehicles ❸
- Evacuate passengers to a safe place ❹
- Call 999 in case of injuries ❺
- State the location clearly ❻
- Follow the response teams' instructions ❼

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2 An accident with injuries

Correct Action: Call 999, secure the area, and don't move the injured person unless there's an immediate danger

Scenario 1 A minor accident with no injuries and the vehicle is drivable

Correct Action: Turn on the signals, move the vehicle to a safe place, and follow the approved procedures

Scenario 4 Smoke appeared from one of the vehicles after the accident

Correct Action: Evacuate the passengers, move away from the vehicle, prevent approach, and call 999

Scenario 3 People are crowding and filming the accident

Correct Action: Move away from the site, don't film or post, and leave room for the specialists

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: What is the first priority after a traffic accident occurs?

Answer: Protecting lives, moving away from the lane, and ensuring safety without endangering yourself

Q2: When should you call 999?

Answer: In case of injuries, fire, smoke, a leak, or a danger to road users

Q3: Is it acceptable to move the injured person after the accident?

Answer: No, unless there's an immediate danger — and you must wait for the competent authorities

Q4: What is the action when you see an accident you're not involved in?

Answer: Don't crowd or film, leave room for the specialists, and call if needed

Thank You

The correct response at accidents protects lives and facilitates the arrival of specialists

Stay calm • Secure the site • Evacuate passengers • No crowding or filming • Call 999

"At accidents, your mindful action may protect a person's life"
