

Managing Thermal and Chemical Burns

Safety, Stopping the Exposure, and Safe First Aid

"The correct response depends on protecting the injured person, stopping exposure to the source of danger, and providing safe first aid"

Why Do We Care About Burns?

Burns are injuries that happen at home, at work, and in public places

**Reducing
Worsening**
of the Injury

**Stopping
Exposure**
to the Source of Danger

**Preventing
Mistakes**
Common Wrong Ones

Requesting Help
Quickly in Severe
Cases

**A Culture of
Prevention**
Everywhere

**Protecting the
Groups**
Most at Risk

Remember: Large, chemical, or electrical burns need immediate help via 999

What Is Meant by Burns?

An injury to the skin or tissue caused by heat, substances, or electricity

**Thermal burns
from fire**

Chemical burns

**Electrical
burns**

**Burns from
prolonged sun
exposure**

**Hot liquids or
surfaces**

Note: This presentation is for awareness and does not replace hands-on training or medical assessment in serious cases

Thermal Burns

Exposure to a direct or indirect heat source

Hot liquids

Steam

Flames or fire

Hot surfaces

Hot oils

Cooking tools
and appliances

Awareness Message: The kitchen and heat sources are among the areas needing the most attention, especially with children

Chemical Burns

Contact of the skin or eye with a harmful chemical

**Concentrated
cleaning
materials**

**Acids or
alkaline
substances**

**Laboratory and
workshop
materials**

**Degreasers
and industrial
substances**

**Substances of
unknown
origin**

Important Note: Handle with care, read the safety instructions, and keep substances away from children

Securing the Area Before Helping

Check for hazards before approaching

Fire or smoke

**A hot surface
or liquid**

**A spilled
chemical**

**Exposed
electricity**

**Glass or sharp
objects**

**Fumes or
strong odors**

Correct Action: If the area is unsafe, move away, don't approach the source, and call 999

The First Step with Burns

Moving the injured person away from the burn source if it's safe

Reassure the injured person and ask for calm

4

Make sure the area is safe

1

Start the appropriate first aid

5

Move the injured person away from the source

2

Call 999 in case of danger

6

Stop exposure to the source of danger

3

Important Message: Don't put yourself in danger while trying to help the injured person

Handling Minor Thermal Burns

Calm and safe initial first aid

Move them away from the heat source

1

Cool with cool or lukewarm running water

2

Don't use ice directly

3

Remove accessories gently

4

Cover with a clean, non-adhesive dressing

5

Monitor the condition and request help

6

Note: Don't use oils, paste, or folk remedies on burns

When Are Thermal Burns Serious?

Cases that call for immediately calling 999

In children or the elderly

5

Caused by electricity or chemicals

6

Severe pain or a deteriorating condition

7

Large or deep burns

1

On the face, hands, or feet

2

Caused by fire and thick smoke

3

Accompanied by difficulty breathing

4

Important Message: When in doubt about the severity of the burn, request help and don't wait

Managing Chemical Burns

Stopping exposure to the substance quickly and safely

Move away and don't touch the substance directly

1

Use gloves or a protective barrier

2

Remove contaminated clothing safely

3

Rinse the area with running water

4

Don't mix substances to treat it

5

Call 999 immediately

6

Keep the substance's container for the specialists

7

Important Note: Some substances need special instructions — read the label and follow the specialists' guidance

Chemical Burns to the Eye

An emergency requiring quick action

Don't rub the eye

Move them away from the source

Rinse the eye gently with water

No drops that aren't recommended

Call 999 immediately

Keep the substance's container

Important Message: The eye is very sensitive — any chemical exposure needs urgent assessment

Electrical Burns

They can be serious even if the visible injury isn't large

Don't touch the injured person while they're in contact with the source

1

Disconnect the source from a safe place

2

Call 999 immediately

3

Don't move them if an injury is suspected

4

Monitor breathing and responsiveness

5

Don't handle the wiring yourself

6

Note: Electricity can cause a hidden danger — always request help

Burns Caused by Smoke or Fire

Signs that call for immediately calling 999

Burns to the face or mouth

4

Difficulty breathing

1

A fire in an enclosed space

5

Severe coughing after smoke

2

Thick smoke at the site

6

Dizziness or severe weakness

3

Correct Action: Move the injured person to a safe place if possible, don't enter a smoke-filled area, and call 999

What Not to Do with Burns

Actions that may increase the harm or delay help

**No ice directly
on the burn**

**No oils or folk
remedies**

**Don't pop the
blisters**

**Don't remove
stuck clothing**

**No adhesive
dressing on the
burn**

**Don't touch
substances
without
protection**

**Don't delay
calling 999**

Awareness Message: Common actions aren't always correct — follow safe first aid and request help

Protecting Children from Burns

Children are more prone due to curiosity

**Keep children
away from the
kitchen**

**Pots away from
the edge**

**No hot drinks
nearby**

**Keep cleaning
materials away**

**Don't leave hot
appliances
unattended**

**Teach the child
not to touch**

Important Message: Preventing burns in children starts with supervision and organizing the home environment

Prevention in the Kitchen and Home

Simple actions reduce home burns

Heat-insulating tools

Don't leave food unattended

Handles turned inward

Caution with steam

Unplug appliances after use

Chemicals in their containers

Don't mix cleaning materials

Note: Mixing cleaning materials can produce dangerous fumes — follow the usage instructions

Prevention at Schools and Work

Laboratories, kitchens, workshops, and maintenance areas

**Compliance
with safety
instructions**

**Personal
protective
equipment**

**Read the
substance
labels**

**Storage in
designated
places**

**Report any
leak**

**Specialist
supervision**

**First aid
supplies and
training**

Awareness Message: Complying with instructions at work and school reduces injuries and strengthens the safety culture

The Role of the First Aid Kit

It helps with the initial handling of minor burns

Medical gloves

Sterile non-
adhesive
gauze

Clean
dressings

Safe scissors

A first aid
guide

The 999
number
written clearly

Note: The kit isn't enough for large, chemical, or electrical burns — call 999

Do's and Don'ts with Burns

Correct Practices and Others to Avoid

Don't ×

- Don't apply ice directly 1
- No folk remedies or oils 2
- Don't remove stuck clothing 3
- Don't touch substances without protection 4
- Don't rub the eye with a chemical on it 5
- Don't enter a smoke-filled area 6
- Don't delay requesting help 7

Do ✓

- Make sure the area is safe 1
- Move the injured person away from the source 2
- Cool thermal burns with water 3
- Use gloves with chemical burns 4
- Call 999 in case of danger 5
- Reassure the injured person and stay with them 6
- Follow the emergency operator's instructions 7

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2 A concentrated cleaning substance spilled on an adult's hand

Correct Action: Move them away from the substance, use protection, rinse with water safely, and call 999 in case of danger

Scenario 1 A child touched a hot surface and pain appeared at the injury

Correct Action: Move them away from the source, cool with running water, no folk remedies, and monitor the condition

Scenario 4 A person put paste or oil on a minor burn

Correct Action: Explain that these substances aren't appropriate, remove the source, and follow correct first aid

Scenario 3 A person was exposed to thick smoke in an enclosed space

Correct Action: Move them to a safe place without putting yourself in danger, and call 999 immediately

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: What is the first step when handling burns?

Answer: Securing the area and moving the injured person away from the source if it's safe

Q2: Is it acceptable to apply ice directly to a burn?

Answer: No, running water is used for minor thermal burns

Q3: What do you do when the eye is exposed to a chemical?

Answer: Don't rub it, rinse it gently with water, and call 999 immediately

Q4: When should you call 999 for burns?

Answer: In case of large, chemical, or electrical burns, or difficulty breathing

Thank You

The correct response begins with moving the injured person away from the source and providing safe first aid

No ice • No folk remedies • Caution with chemical and electrical burns • Call 999 in case of danger

"The correct response to burns begins with safety and ends with requesting help at the right time"
