

Fire Prevention in Schools

Prevention begins with awareness and attention

"Fire prevention is a shared responsibility that begins with following instructions and early reporting"

Why do we learn fire prevention?

Fires can start from a simple act or small oversight

Protecting lives

Of students and staff

Protecting the building

And school property

Reducing fires

And preventing them before they occur

Culture of reporting

Hazards early

School readiness

During emergencies

Remember: Preventing a fire is easier and faster than dealing with it afterward

Causes of fires in the school environment

Sources that may lead to fire if not handled safely

Unsafe wiring connections

Overloading outlets

Damaged extensions

Unattended devices

Poor storage of flammables

Unsafe heat sources

Paper buildup near heat

Neglecting safety in laboratories

Message: Every hazard sign ignored can turn into a major incident

Electrical safety at school

Electricity is one of the most common sources of danger

**Do not tamper
with outlets**

**Do not touch
exposed wiring**

**Do not
overload
outlets**

**Do not use
devices
without
permission**

**Report
overheating
and odors**

**Keep liquids
away from
devices**

**Use approved
connections**

Remember: Do not try to fix any electrical fault yourself; inform the supervisor immediately

Fire prevention in classrooms

Classrooms contain flammable materials

Keep paper away from outlets and devices

1

Keep bags organized

4

Do not leave devices plugged in unnecessarily

2

Do not block smoke detectors

5

Do not tamper with electrical panels

3

Report any fault or odor to the teacher

6

Message: An organized and safe classroom reduces fire risk and aids evacuation

Safety in school laboratories

Strict instructions for handling materials and equipment

**Follow the
teacher's
instructions**

**Do not touch
materials
without
permission**

**Do not use
flames without
supervision**

**Keep
flammables
away**

**Turn off
devices after
use**

**Do not mix
substances
randomly**

**Know the
safety
equipment**

If you notice danger: Inform the teacher immediately, move away, and do not try to handle it alone

Safety in the school cafeteria and kitchen

Cooking oils and heat sources can cause fires

Do not approach cooking equipment

Keep flammables away

Regular cleaning by specialists

Do not leave cooking unattended

Provide a suitable fire extinguisher

Report any burning smell

Important fact: Cooking oil fires cannot be extinguished with water, as it may spread the fire

Safety and firefighting equipment

Installed to protect lives and must be maintained

Fire
extinguishers

Fire alarms

Smoke
detectors

Fire hoses

Guidance signs

Emergency
exits

First aid kits

Message: Safety equipment is installed to save lives during emergencies

Fire extinguisher: knowledge, not adventure

Helps control a fire at its start

Pull

The safety pin

Aim

The nozzle at the base of the fire

Squeeze

The handle

Sweep

From side to side

⚠ **Use from 2-3 meters away**

⚠ **Keep an exit route behind you**

⚠ **Do not use with heavy smoke**

Top priority: Safe exit and reporting the hazard — students may use an extinguisher only with training

What do you do if you notice smoke or a burning smell?

A warning sign that calls for speed and calmness

Follow evacuation instructions

5

Avoid approaching or taking photos

6

Avoid causing panic

7

Move away from the area immediately

1

Do not touch the source of danger

2

Do not open a door with smoke

3

Inform the teacher or supervisor

4

Important message: Early reporting can prevent the fire from spreading

Do and Don't for fire prevention

Right practices and ones to avoid

Don't ×

Do not tamper with electricity

1

Do not overload outlets

2

Do not use equipment without authorization

3

Do not block emergency exits

4

Do not approach smoke

5

No water on oil fires

6

Do ✓

Report any hazard immediately

1

Keep corridors clear

2

Use devices with permission

3

Keep flammables away

4

Follow instructions

5

Respect safety equipment

6

Interactive Scenarios

Practical application of what you learned

Scenario 1

You notice exposed electrical wiring in the classroom

Correct action: Move away and inform the teacher or supervisor immediately

Scenario 2

A burning smell and heat near an electrical device

Correct action: Do not approach the device, and inform the supervisor right away

Scenario 3

A student is using the fire extinguisher without permission

Correct action: Inform the teacher — unauthorized use puts everyone at risk

Scenario 4

You notice smoke in the laboratory

Correct action: Move away from the spot, inform the teacher, and follow evacuation instructions

Test your knowledge

Quick questions to assess your understanding

Q1: Is it allowed to use a fire extinguisher without training?

Answer: No, because it must be used according to specific instructions

Q2: What do you do if you notice smoke?

Answer: Move away and inform the teacher or supervisor immediately

Q3: Do we use water on oil or electrical fires?

Answer: No, because it can increase the danger

Q4: Why must exits remain clear?

Answer: To enable fast and safe evacuation during emergencies

Q5: What is the most important step for fire prevention?

Answer: Following instructions and early reporting

Thank you

Fire prevention is everyone's responsibility

Don't tamper with electricity • Report hazards • Keep exits clear • Follow lab rules • Call 999

"Your awareness today may prevent a fire tomorrow"
