

Safety When Using Heaters in Winter

Safe warmth... and ongoing prevention

"Heating provides warmth, but unsafe use can cause fires and health hazards"

Why is winter heating safety important?

Heater use increases, and so does the chance of accidents

Fire prevention

Home fires

Reducing burns

From hot surfaces

Preventing suffocation

Carbon monoxide

Protecting children

And the elderly

Protecting the home

And property

Remember: Warmth is safe only when heating is used properly

Top heater hazards

Can become dangerous when used unsafely

**Fire from
flammable items**

**Burns from hot
surfaces**

**Overloading
outlets**

Unsafe wiring

**Running them
while sleeping**

**Charcoal inside
the home**

**Carbon
monoxide
buildup**

Message: Most heating hazards can be prevented with attention and ventilation

Safety when using electric heaters

Need careful use and the right placement

**Place them on
a stable
surface**

**Keep them
away from
curtains and
furniture**

**Not in
corridors or
exits**

**Don't leave
them
unattended**

**Turn them off
before
sleeping**

**Do not use a
damaged cord**

**Choose models
with auto shut-
off**

Remember: A safe distance around the heater reduces fire risk

Electrical connections and outlets

Unsafe use can lead to overheating

**Plug it directly
into the outlet**

**Avoid non-
approved
adapters**

**Don't overload
the outlet**

**Check the cord
before use**

**No cords under
carpets**

**Keep them
away from
moisture**

**Unplug when
not in use**

Message: Heaters use high power, so they need a safe and suitable connection

Charcoal and grills indoors

A major risk to health and safety

Instructions

Do not use charcoal for heating indoors

1

No grills in rooms or tents

2

No fuel devices in poorly ventilated spaces

3

Use indoor-safe heating only

4

Hazards

Carbon monoxide production

Risk of suffocation

Risk of fires

Difficulty detecting the danger

Children affected quickly

Remember: Carbon monoxide is called the silent killer because it has no color or smell

Ventilation and carbon monoxide alarms

Help reduce poisoning risk

Ventilate the area well

Do not block ventilation openings

Install alarms

Test them regularly

Do not ignore the alarm sound

Move to a well-ventilated area

Message: Ventilation and early warning can prevent serious poisoning

Protecting children And the elderly

More vulnerable to injuries and effects

**Keep heaters
away from
children**

**Don't leave
them alone
near them**

**Use safety
barriers**

**No coverings
near the
heater**

**Watch over the
elderly**

**Don't place
them near
sleeping areas**

**Teach children
not to touch
them**

Remember: Continuous supervision protects the most vulnerable

Warning signs while heating is in use

Signs that demand immediate action

Burning smell

**Heat in the
cord**

Unusual sound

**Unstable
operation**

**Smoke or
discoloration**

**Headache or
dizziness**

**Carbon
monoxide
alarm**

Correct action: Stop use safely, move away, and inform the responsible person or specialists

What to do during an emergency

Smoke, fire, or poisoning

Move to a safe place

5

Do not return before the danger is gone

6

Call 999

7

Stay calm

1

Safely stop the source of danger

2

Move family members away

3

Open ventilation if possible

4

Important message: Life safety first; do not risk handling a danger that's out of control

Do and Don't in heating safety

Right practices and ones to avoid

Don't ✗

No charcoal inside the home

1

Not near curtains or covers

2

Don't leave them unattended

3

No unsafe connections

4

Don't overload the outlet

5

Don't ignore a burning smell

6

Do ✓

Use approved devices

1

Place them on a stable surface

2

Keep flammables away

3

Turn them off before sleeping

4

Test the CO alarm

5

Provide proper ventilation

6

Interactive Scenarios

Practical application of what you learned

Scenario 1 Unusual heat in the heater's plug

Correct action: Turn off the heater safely, unplug it, and request an inspection

Scenario 2 Someone wants to use charcoal in a closed room

Correct action: Don't allow it; charcoal indoors causes carbon monoxide poisoning

Scenario 3 The carbon monoxide alarm goes off

Correct action: Move to a well-ventilated area or outside, and call emergency services

Scenario 4 The heater is near a curtain or cover

Correct action: Move the heater to a safe spot away from flammables

Test your knowledge

Quick questions to assess your understanding

Q1: Is it allowed to leave a heater running while sleeping?

Answer: No, it must be turned off and unplugged before sleeping

Q2: Can charcoal be used for heating indoors?

Answer: No, it can produce carbon monoxide and cause suffocation

Q3: What do you do if you smell burning from the heater?

Answer: Stop use safely, move away, and inform a specialist

Q4: Why do we keep heaters away from curtains?

Answer: Because they are flammable and can cause a fire

Q5: What's the benefit of a carbon monoxide alarm?

Answer: It warns early against this invisible, odorless gas

Thank you

Heating safety is everyone's responsibility

Safe heaters • Keep flammables away • No charcoal indoors • Turn off before sleeping • Ventilate • 999

"Safe warmth starts with your awareness and following safety guidelines"
