

Safety on Farms and Protecting Agricultural Resources

A Safe Agricultural Environment... and Sustainable Production

"Farm safety is a shared responsibility that protects workers, visitors, property, and agricultural resources"

Why Do We Care About Safety on Farms?

Equipment, chemicals, and electricity require clear preventive measures

Protecting Workers

and Visitors from Injuries

Fire Prevention

in Storerooms and Fields

Protecting Crops

Equipment, and Property

Reducing Risks

from Pesticides and Chemicals

Safe Use

of Agricultural Equipment

Protecting the Environment

and Agricultural Resources

Remember: A safe farm helps sustain production and reduce losses

Key Risks on Farms

Knowing the sources of danger helps prevent accidents before they happen

Falling in uneven areas

5

Heat exhaustion during outdoor work

6

Bites from insects and reptiles

7

Storing fuel and fertilizers unsafely

8

Fires from dry grass and storerooms

1

Injuries from agricultural equipment and machinery

2

Exposure to pesticides and chemicals

3

Electric shock near irrigation systems

4

Message: Risks on a farm are many, and prevention starts with knowing them in advance

Fire Prevention on Farms

Dry grass and fuel increase the likelihood of fires breaking out

**Remove dry
grass and
debris**

**Don't light fire
near crops**

**Store fuel away
from heat**

**Don't toss
cigarette butts**

**Provide
suitable fire
extinguishers**

**Keep hot
equipment
away from dry
materials**

**Report smoke
or fire
immediately**

Remember: A small fire on a farm can spread quickly when dry materials and wind are present

Safe Storage on Farms

Disorganized storage can lead to fires, poisoning, and injuries

**Store fuel in
designated
containers**

**Separate
chemicals from
feed**

**Keep
pesticides in a
ventilated
place**

**Keep
flammable
materials away**

**Arrange tools
away from
walkways**

**Keep the
storerooms
clean**

**Put up clear
warning signs**

Message: An organized storeroom reduces risks and protects agricultural resources

Safety When Using Agricultural Equipment

Equipment is safe only when used the right way

Turn off the equipment before maintenance

5

Don't use any equipment without training

1

Use personal protective equipment

6

Read the operating instructions before starting

2

Keep children away from operating areas

7

Inspect the equipment before operating it

3

Report any malfunction or strange noise

8

Don't go near moving parts

4

Remember: Agricultural equipment is only safe when used the right way

Electrical Safety and Irrigation Systems

Electricity near water increases the risk of electric shock

**Don't touch
electricity with
a wet hand**

**Keep wiring
away from
water**

**Inspect the
pumps
regularly**

**Avoid damaged
wiring**

**Don't fix faults
yourself**

**Use specialists
for
maintenance**

**Stop when
there's a
burning smell**

Important Message: Water and electricity on farms require constant monitoring and maintenance

Safety When Using Pesticides and Chemicals

A safe substance is one used according to the instructions only

Read the substance's label before use

1

Use personal protective equipment

2

Don't mix substances randomly

3

Don't use them when children or visitors are present

4

Don't store them in food or drink containers

5

Wash your hands thoroughly after handling

6

Report any spill immediately

7

Remember: Pesticides and chemicals require careful handling according to the instructions and procedures

Protecting Workers from Heat Exhaustion

Working under the sun and high temperatures requires protection

**Drink water
regularly**

**Take breaks in
the shade**

**Avoid working
during peak
hours**

**Wear light,
suitable
clothing**

**Use a head
covering**

**Watch for
fatigue and
dizziness**

**Seek help
when
symptoms
appear**

Message: Rest and hydration are an essential part of agricultural work safety

Protecting Children and Visitors on the Farm

A farm is not a safe place for children without supervision

**Don't leave
children
unsupervised**

**Keep them
away from
agricultural
equipment**

**Prevent them
from entering
the storerooms**

**Keep them
away from
wells and
irrigation
channels**

**Don't let them
approach the
animals**

**Clarify the safe
movement
boundaries**

**Put up clear
warning signs**

Remember: Continuous supervision protects children and visitors from unexpected risks

Safety from Animals, Insects, and Reptiles

Paying attention to the surroundings reduces the risk of bites

**Don't approach
animals
without
supervision**

**Don't touch
nests and
burrows**

**Wear suitable
footwear**

**Check seating
areas before
using them**

**Keep the site
clean**

**Report when
you notice a
dangerous
reptile**

**Seek help in
case of bites**

Message: Paying attention to the surroundings reduces the risk of bites and injuries

Protecting Agricultural Resources from Risks

Early detection of risks preserves the crops

**Keep the farm
clean**

**Monitor the
crops regularly**

**Use pesticides
according to
the
instructions**

**Protect water
sources from
contamination**

**Store
fertilizers
safely**

**Maintain
irrigation
systems
regularly**

**Report any
disease or
hazard**

Message: Early detection of risks preserves crops and reduces losses

What Do You Do When an Emergency Happens on the Farm?

A precise location and calm action support a quick response

Quick Steps During an Emergency:

Call 999 if necessary

Notify the supervisor immediately

Move away from the source of danger

Stay calm

Don't handle electricity yourself

Keep children away from the site

State the farm's location precisely

Call 999 from a safe place

Important Message: A precise location and calm action support a quick response

Do's and Don'ts on Farms

Correct Practices and Others to Avoid

Don't ×

- Don't light fire near crops
- Don't use damaged equipment
- Don't mix chemicals randomly
- Don't touch electricity with a wet hand
- Don't leave children unsupervised
- Don't store chemicals in food containers
- Don't ignore any malfunction or hazard

4
5
6
7

Do ✓

- Use equipment after proper training
- Store fuel and chemicals safely
- Keep the storerooms clean
- Keep children away from danger
- Provide fire extinguishers and first aid supplies
- Monitor the weather and temperatures
- Report any hazard immediately

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2

A child approaches an electric water pump

Correct Action: Move them away immediately and notify the supervisor to ensure the site is safe

Scenario 1

You noticed smoke near the feed storeroom

Correct Action: Move away from the site, notify the supervisor immediately, and call 999 if the danger is imminent

Scenario 4

A worker feels dizzy while working under the sun

Correct Action: Move them to the shade, provide water if they're conscious, and request help

Scenario 3

A chemical spilled in the storeroom

Correct Action: Don't touch it, move away from the site, and notify the supervisor or specialist

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: Why should fuel be kept away from heat sources?

Answer: Because it's flammable and may cause a fire

Q2: Is it allowed to use agricultural equipment without training?

Answer: No, it must be used after training and knowledge of the instructions

Q3: What do you do when you notice damaged wiring near irrigation?

Answer: I stay away from it and notify the specialist or supervisor immediately

Q4: Why don't we store pesticides in food containers?

Answer: To avoid poisoning or misuse

Q5: What is the most important measure to protect agricultural resources?

Answer: Continuous monitoring, safe storage, and early reporting

Thank You

Farm safety and protecting agricultural resources is everyone's responsibility

Organize • Use safely • Store with care • Supervise children • In emergencies call 999

"A safe farm means safer people and more sustainable agricultural resources"
