

Emergency Plans in High-Rise Buildings

Organized readiness... and a safe response

"The clearer and more widely known the emergency plan is, the faster and safer the response"

Why Do High-Rise Buildings Need Emergency Plans?

They hold a large number of people and require precise procedures due to their many floors

Organizing action

when the emergency occurs

Facilitating evacuation

to safe areas

Reducing confusion

and stampeding among people

Protecting everyone

residents, staff, and visitors

Clarity of roles

and responsibilities

Fast communication

with the relevant authorities

Remember: Prior readiness reduces risks during an emergency

What Is an Emergency Plan?

Clear procedures that define how to act when a danger occurs inside the building

Identifying
types of risks

The reporting
and alarm
system

Evacuation
routes

Emergency
exits

Assembly
points

Safety team
roles

Supporting
special-needs
groups

Message: A good plan must be clear, workable, and known to everyone

Potential Risks in High-Rise Buildings

Different types of emergencies require prior preparation

**Fires and
smoke**

**The alarm
going off**

Gas leaks

Power outages

**Elevator
malfunctions**

**Evacuation
crowding**

**Severe
weather**

Remember: Identifying risks helps set suitable procedures for each case

The Alarm and Reporting System

The first means of warning, and it must be taken seriously

Don't ignore the alarm

5

Stop any activity immediately

1

Report any smoke or smell

6

Stay calm

2

Call 999 in case of immediate danger

7

Listen to the voice instructions

3

Head to the assembly point

8

Follow building management's directions

4

Important Message: A fast, organized response reduces risks and protects everyone

Evacuation Routes and Emergency Exits

Knowing them is essential to everyone's safety

**Know the
nearest exit**

**Know an
alternative
route**

**Keep the
corridors clear**

**Don't use exits
for storage**

**Don't lock the
emergency
doors**

**Follow the
illuminated
guidance signs**

**Report any
obstacle**

Remember: A blocked exit can put others' lives at risk

Using the Stairs During an Emergency

The primary means of evacuation in high-rise buildings

Use the stairs only for evacuation

1

Don't use elevators during a fire

2

Stay calm and don't stampede

3

Hold the handrail when going down

4

Leave space for the emergency teams

5

Don't stop inside the stairwell

6

Help those in need safely

7

Message: Orderly descent via the stairs is safer than stampeding

Elevators During an Emergency

They may malfunction or stop on a dangerous floor — don't use them during a fire

Don't try to force the door open

5

Wait for help from the specialists

6

Don't risk jumping out of it

7

Report your location precisely

8

Don't use the elevator when the alarm sounds

1

Use the emergency stairs

2

Follow management's instructions

3

Press the emergency button if you are inside it

4

Remember: The elevator may not be safe during a fire or power outage

Assembly Points and Safe Areas

After evacuation, follow instructions and don't return to the building

Making sure everyone is safe

Identifying missing persons

Preventing crowding near entrances

Making way for the emergency teams

Coordinating communication with management

Stay away from the facades

Don't return except with official permission

Message to Employees: Leaving the building doesn't mean the emergency is over — wait for instructions

The Role of Building Management and the Safety Team

Organizing the response during an emergency

Activating and executing the plan

Directing residents and staff

Ensuring routes are clear

Monitoring the alarm and safety equipment

Communicating with the relevant authorities

Assisting special-needs groups

Message: Following the safety team's instructions helps the emergency plan succeed

The Responsibility of Residents, Staff, and Visitors

Safety is a shared responsibility between management and users

The elderly

Limited mobility

People of Determination

Special evacuation arrangements

Children

Need accompaniment

The ill

Medications and medical equipment

Pregnant women

Avoid strain

Visitors

Unfamiliar with the building

Message: A successful emergency plan accounts for everyone's needs

What Do You Do if the Corridor Is Full of Smoke?

In some cases, exiting through the corridor is not safe

Don't open a hot door

Close the door tightly

Move to a safe spot inside the unit

Place a wet cloth under the door

Call 999 and state your location

Follow the specialists' instructions

Don't go down through a smoke-filled route

Stay calm

Remember: The alternative plan may save your life if the main route is blocked

Actions to Avoid in High-Rise Buildings

Some actions can increase danger and hinder the response

**Don't ignore
the alarm**

**Don't use the
elevator**

**Don't run or
push**

**Don't block
emergency
exits**

**Don't return to
the building
without
permission**

**Don't spread
unconfirmed
information**

**Don't act
without
guidance**

Important Message: Responsible behavior protects everyone during an emergency

Communication During an Emergency

Accurate information enables a better response

Example of a clear report:

"There is smoke on the tenth floor, near the elevator, and there are people who need help"

State the building's name and location

Mention the floor number and type of danger

Report those who need help

Avoid spreading unconfirmed information

Remember: A clear, accurate report saves lives and speeds up the arrival of help

Do's and Don'ts in High-Rise Buildings

Correct Practices and Others to Avoid

Don't ×

Don't use the elevator during a fire

1

Don't block emergency exits

2

Don't ignore the alarm

3

Don't return to the building after evacuation

4

Don't open a door with heavy smoke behind it

5

Don't spread unconfirmed information

6

Don't act without guidance

7

Do ✓

Get to know the emergency exits

1

Follow building management's instructions

2

Use the stairs during a fire

3

Report any hazard immediately

4

Head to the assembly point

5

Help others safely

6

Call 999 when needed

7

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2

The elevator is available and the alarm is going off

Correct Action: Don't use the elevator; head to the emergency stairs

Scenario 1

You heard the fire alarm in a high-rise building

Correct Action: Stay calm, follow management's instructions, and use the stairs

Scenario 4

You saw storage blocking the emergency exit

Correct Action: Inform building management or the safety team immediately

Scenario 3

You noticed heavy smoke in the corridor

Correct Action: Don't enter, close the door, call emergency services, and state your location

Test Your Knowledge

Quick questions to assess what you've learned

Q1: Is it allowed to use the elevator during a fire?

Answer: No, you must use the designated emergency stairs

Q2: What Do You Do if the Corridor Is Full of Smoke?

Answer: I don't enter, I close the door, and I call emergency services with my location

Q3: Why do we know more than one exit route?

Answer: To use the alternative if the first route is unsafe

Q4: Is it allowed to return to the building after evacuation?

Answer: No, you must wait for official permission

Q5: What is the role of the assembly point?

Answer: Organizing people and making sure they are safe

Thank You

Emergency plans in high-rise buildings are a shared responsibility

Know the exits • Use the stairs • Follow management • Assembly point • Call 999

"Readiness and commitment to the plan make high-rise buildings safer and more secure"
