

Evacuation Plans in Multi-Story Buildings

Organized evacuation... and safety for all

"Safe evacuation depends on knowing the routes, following instructions, and reaching the assembly point without delay"

Why Do We Need an Evacuation Plan?

Buildings hold a large number of people, and the absence of a plan causes confusion

Protecting lives

the priority of every
emergency plan

Reducing injuries

while leaving the
building

Organizing movement

in the stairs and
corridors

Facilitating the response

for the emergency
teams' work

A safe assembly point

a pre-designated
location

Accounting for everyone

identifying the missing

Remember: A plan known in advance reduces confusion during an emergency

What Is an Evacuation Plan?

Clear procedures for people to exit safely when an emergency occurs

**Evacuation
routes**

**Emergency
exits**

**The designated
stairs**

**The assembly
point**

**Safety team
roles**

**Assisting those
in need**

**The reporting
and
communication
mechanism**

Message: A successful plan must be clear, easy to apply, and known to everyone

When Does Evacuation Happen?

Situations that call for leaving the building or moving to a safe area

Fire alarm

**Smoke or
burning**

**A fire breaking
out**

Gas leak

**Structural
hazard**

**Direction from
management**

**Any emergency
situation**

Remember: Don't wait to see the danger yourself — follow instructions as soon as they're issued

When You Hear the Alarm

The alarm sound is a warning that must be handled seriously and calmly

Head to the nearest emergency exit

5

Use the stairs only

6

Head to the assembly point

7

Don't return until after official permission

8

Stop any activity immediately

1

Stay calm

2

Listen to the voice instructions

3

Leave personal belongings

4

Important Message: Delaying or ignoring the alarm can put you and others at risk

Evacuation Routes and Emergency Exits

Designed to make people's safe exit easier

**Get to know
the nearest
exit**

**Know an
alternative
route**

**Keep the
corridors clear**

**Don't use exits
for storage**

**Don't lock the
emergency
doors**

**Follow the
guidance signs**

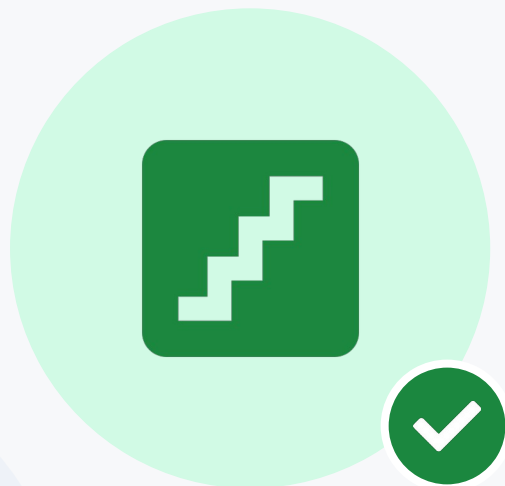

**Report any
blocked exit**

Remember: A clear, obstacle-free exit can save a life

Using the Stairs During Evacuation

The stairs are the primary evacuation route during a fire

Use the stairs only during a fire

1

Don't use elevators at all

2

Go down calmly and without stampeding

3

Hold the handrail when needed

4

Leave space for those who need help

5

Don't stop inside the stairwell

6

Don't carry items that hinder movement

7

Message: Orderly descent protects everyone from stampeding and injuries

Why Don't We Use Elevators?

Elevators can become unsafe during a fire and power outage

They may lengthen the time to exit the building

5

Their doors may not open normally

6

They may trap people inside the building

7

Use the designated emergency stairs, and follow management's instructions

8

They may stop due to a power outage

1

They may go to a smoke-affected floor

2

They may malfunction and hinder evacuation

3

They may interfere with the emergency teams' work

4

Remember: An aware employee's behavior helps protect the whole team

The assembly point

The safe location outside the building for gathering after evacuation

**Making sure of
safety**

**identifying the
missing**

**Organizing
people safely**

**Making way for
emergency
services**

**Head straight
to the point**

**Don't stand
near the
entrances**

**Report before
leaving**

Message to Employees: Reaching the assembly point is an essential part of the evacuation plan

The Role of Building Management and the Safety Team

Responsible for activating the evacuation plan and organizing the response

Issuing evacuation instructions

Directing people to safe routes

Ensuring corridors are clear

Following up on those who need help

Communicating with the relevant authorities

Organizing a safe return to the building

Message: Following the safety team's instructions helps the evacuation succeed

The Responsibility of Residents, Staff, and Visitors

Successful evacuation depends on the commitment of everyone inside the building

The elderly

Limited mobility and need for help

People of Determination

Special evacuation arrangements

Children

They need accompaniment and supervision

The ill

Medications and medical equipment

Pregnant women

Avoid strain and rushing

Visitors

Unfamiliar with the building

Message: A good evacuation plan accounts for everyone's needs

Individuals' Responsibilities Inside the Building

Successful evacuation depends on the commitment of everyone inside the building

**Know the
emergency exits**

**Read the
guidance signs
regularly**

**Don't block
corridors or
stairs**

**Report any
hazard or
obstacle**

**Follow the
evacuation
instructions**

**Don't use
elevators during
a fire**

**Help others
without
endangering
yourself**

**Stay at the
assembly point**

Remember: Everyone inside the building has a role in general safety

If the Evacuation Route Is Not Safe

The usual route may be unsuitable due to smoke or heat

Don't enter an area of heavy smoke

Use the safe alternative route

Close the doors behind you

Move to a safer spot

Call 999 and state your location

Report the number of people

Follow the relevant authorities' instructions

Important Message: Don't risk entering an unsafe route — ask for help and make your location clear

Communication During Evacuation

Accurate information helps speed up the response

Example of a clear report:

"There is smoke on the fifth floor near the east stairwell, and there is a person who needs help"

State the
building's name
and location

Mention the
floor and type of
danger

Report those
who need help

Avoid spreading
unconfirmed
information

Remember: A clear, accurate report saves lives and speeds up the arrival of help

Do's and Don'ts During Evacuation

Correct Practices and Others to Avoid

Don't ×	Do ✓
Don't use the elevator 1	Stay calm 1
Don't run or push others 2	Use the stairs 2
Don't return to the building 3	Follow the guidance signs 3
Don't carry items that hinder evacuation 4	Leave personal belongings 4
Don't stand in front of the entrances 5	Head to the assembly point 5
Don't spread unconfirmed information 6	Help those in need safely 6
Don't ignore the alarm 7	Report any missing person 7

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2 The nearby exit is blocked by smoke

Correct Action: Use a safe alternative route, or call emergency services and state your location

Scenario 1 You heard the alarm in a multi-story building

Correct Action: Stop immediately, follow the evacuation route, and use the stairs

Scenario 4 You left the building and remembered an important item

Correct Action: Don't return to the building, and wait for official instructions

Scenario 3 You saw an elderly person who needs help

Correct Action: Inform the safety team and help them if it's safe, without putting yourself at risk

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: What is the safe means of evacuation during a fire?

Answer: Using the designated emergency stairs

Q2: Is it allowed to use the elevator during a fire?

Answer: No, the elevator may be unsafe during an emergency

Q3: What do you do after leaving the building?

Answer: I head to the assembly point and wait for instructions

Q4: Why must we not return to the building?

Answer: Because the danger may be ongoing or not visible

Q5: What do you do if the evacuation route is not safe?

Answer: I use an alternative route if it's safe, or I call emergency services and state my location

Thank You

Evacuation plans in multi-story buildings are everyone's responsibility

Know the exits • Use the stairs • Head to the assembly point • Don't return to the building • Call 999

"Organized evacuation protects lives and makes buildings safer and more secure"
