

Managing Risks in High-Density Facilities and Housing

Resident awareness, safe exits, and a clear evacuation plan

"The more occupants there are, the greater the need for organization and adherence to instructions"

Why Do We Care About This Topic?

Large numbers in limited spaces

Protecting

a large number

Reducing

confusion

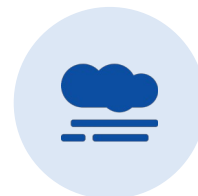

Preventing

overcrowding

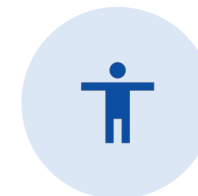

Fast access

for response

**Reducing the
spread**

of smoke

**Supporting the
groups**

that are most
vulnerable

Remember: Safety depends not only on the individual, but on everyone adhering to the instructions

What Is Meant by High-Density Facilities?

Buildings with large numbers or that are hard to evacuate quickly

**Residential
towers**

**Residential
complexes**

**Multi-story
buildings**

**Workers'
housing**

**Hotels and
apartments**

**Administrative
centers**

**Facilities that
receive visitors**

Note: A building's height or occupant density requires greater awareness of emergency plans

The Main Risks in High-Density Buildings

Diverse risks due to use and density

**Overcrowding
at the exits**

**Not knowing
the routes**

Blocked exits

**Materials piled
up in corridors**

**Misuse of
elevators**

**The spread of
smoke**

**Delayed
reporting**

**Neglecting
those who
need help**

Awareness Message: Danger does not start only from fire, but from obstacles and poor organization

Emergency Exits and Evacuation Routes

The primary lifeline

**Know the
nearest exit**

**Know an
alternative exit**

**Do not place
items in the
corridors**

**Do not block
the exits**

**Follow the
guidance signs**

**Report any
obstacle**

Important Note: A closed or blocked exit can cause a dangerous delay during an emergency

Stairs During Emergencies

The primary evacuation route

**Stairs instead
of the elevator**

**Calm and
avoiding
stampedes**

**Leave space
for those who
need it**

**Do not stop to
film**

No large items

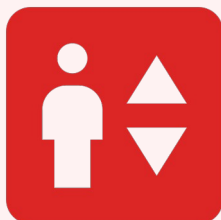

**Follow the
evacuation
direction**

Important Message: The staircase is not a gathering place, but an exit route that must remain open

Elevators and Emergencies

Using them during a fire can be dangerous

It may stop during a power outage

1

It may be affected by smoke or fire

2

It may open on an unsafe floor

3

It hinders the work of response teams

4

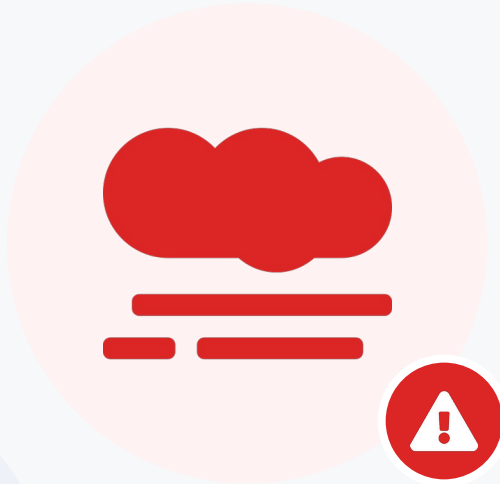

It causes delays in exiting

5

Correct Action: Use the stairs and emergency exits, and do not use the elevator except under specialists' guidance

Smoke Inside Buildings

The greatest fire hazard, and it can spread quickly

Do not enter an area full of smoke

1

Stay low while moving

2

Close the doors behind you

3

Do not open a hot door

4

Head to an alternative route

5

Call 999 if you are trapped

6

Important Message: Avoid smoke as much as possible — it can be more dangerous than flames

The Assembly Point

To make sure people are safe after evacuation

**Know its
location in
advance**

**Head to it
directly**

**Do not stand
near the
entrances**

**Do not
obstruct the
ambulance**

**Report missing
persons**

**Do not go back
without
permission**

Note: Getting out of the building is not enough — you must move away to a safe assembly point

The Role of the Building or Facility Management

Preparing the site for emergencies

**Readiness of
the alarm
systems**

**Validity of
safety
equipment**

**Open and clear
exits**

Guidance signs

**Periodic
evacuation
drills**

**Educating the
residents**

**A plan for
those who
need help**

Awareness Message: Effective risk management starts before the emergency, not only during it

The Role of Residents and Users

Safety is a shared responsibility

Know the exits

No items in the corridors

Do not tamper with the alarm systems

Report hazards

Follow the evacuation instructions

Help those who need it if possible

Do not crowd or film

Important Message: Building safety is a shared responsibility among management, residents, and visitors

The Groups Most Vulnerable to Risk

They need help during evacuation

Children

The elderly

People of
determination

The sick or
injured

Those
unfamiliar with
the exits

Visitors and
new workers

Those who
need assistive
devices

Important Guidance: A plan must be prepared in advance to help these groups without endangering others

Workers' Housing and Shared Accommodation

They require special organization

**Crowded
rooms and
corridors**

**Storage in
evacuation
routes**

**Multiple
electrical
appliances**

**Cooking in
unauthorized
places**

**Poor
knowledge of
the plan**

**An unclear
assembly point**

Important Message: Adhering to organization within shared housing reduces risks

Risks in Residential Towers

Special awareness due to height and number of residents

**Know the
floor's exits**

**No elevator
during a fire**

**No shoes in the
corridors**

**Close the
apartment
door**

**Do not open a
door to smoke**

**Follow the
management's
instructions**

**Call 999 in case
of danger**

Note: Corridors are not storage areas, but evacuation routes

What to Do When the Alarm Goes Off?

Take it seriously and do not assume it is false

Help those who need it if possible

5

Head to the assembly point

6

Call 999 in case of danger

7

Stop any activity

1

Check the safe route

2

Do not use the elevator

3

Use the stairs

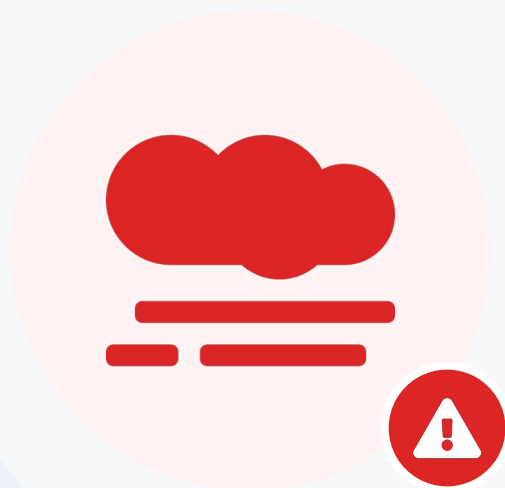

4

Awareness Message: Ignoring the alarm may waste important time for a safe exit

What to Do If You Are Trapped?

Act calmly and request help

Stay in a safer place

1

Close the door between you and the danger

2

Place cloth under the door

3

Call 999 and state your location

4

Move toward a safe window

5

Do not jump or use an unsafe route

6

Wait for the specialists' instructions

7

Note: Trying to escape through thick smoke may be more dangerous than staying and requesting help

Managing Risks Before Emergencies

Preparedness reduces confusion

Reviewing the exits

Keeping corridors and stairs clear

Knowing the assembly point

Memorizing the number 999

Evacuation drills

Reporting faults

Do not tamper with safety equipment

Educating the family

Important Message: Preparedness does not take long, but it makes a big difference during an emergency

Common Mistakes to Avoid

Actions that increase the danger

**Ignoring the
alarm**

**Using the
elevator**

**Items at the
exits**

**Crowding in
the corridors**

**Going back
after leaving**

**Opening doors
to smoke**

**Filming and
posting**

**Obstructing
the ambulance**

Awareness Message: Small wrong actions can delay the evacuation of dozens of people

Do's and Don'ts in High-Density Buildings

Correct Practices and Others to Avoid

Don't ×

Do not use the elevator during a fire

1

Do not ignore smoke

2

No items in the corridors

3

Do not crowd at the exits

4

Do not go back after evacuating

5

Do not film or post

6

Do not obstruct the response teams

7

Do ✓

Know the emergency exits

1

Keep the corridors clear

2

Take the alarm seriously

3

Use the stairs

4

Head to the assembly point

5

Help those who need it if possible

6

Call 999 in case of danger

7

Interactive Scenarios

A practical application of what you have learned

Scenario 2

You find furniture blocking an emergency exit

Correct Action: Report the obstacle immediately — emergency exits must always remain clear

Scenario 1

A fire alarm goes off and some residents think it is false

Correct Action: Take it seriously, use the stairs and exits, and head to the assembly point

Scenario 4

An elderly person needs help getting down

Correct Action: Help them if it is safe, and inform the officials of their location and need for support

Scenario 3

Someone tries to use the elevator during evacuation

Correct Action: Stop them and direct them to the stairs and emergency exits

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: Why do we not use the elevator during a fire?

Answer: It may stop, be affected by smoke, or open on an unsafe floor — use the stairs

Q2: Why is it important to keep corridors free of obstacles?

Answer: It ensures fast evacuation and prevents crowding and delay during an emergency

Q3: What do you do when you hear the fire alarm?

Answer: Take it seriously, follow the evacuation route, do not use the elevator, and head to the assembly point

Q4: What do you do if you are trapped by smoke?

Answer: Stay in a safe place, close the door, call 999, and state your location precisely

Thank You

Prevention begins with awareness and daily commitment to safety measures

Know the exits • Stairs, not elevators • Clear corridors • Call 999

"In high-density buildings, one person's commitment can help protect everyone"
