

Managing Weather and Flood Risks

Advance preparation and mindful action during weather conditions

"Preparing before a weather event is easier and safer than acting under pressure during the danger"

Why Do We Care About Managing Weather Risks?

Accidents, water accumulation, and service outages

Protecting lives
and property

Reducing accidents
during rain

Staying away from
valley watercourses

Family readiness
for emergencies

Protecting the groups
that are vulnerable

Clarity and organization
during alerts

Remember: Preparing before a weather event is easier and safer than acting under pressure

What Is Meant by Managing Weather Risks?

Knowing the risk and preparing for it

**Following
official alerts**

**Securing the
home and
property**

**Avoiding
dangerous
roads**

**A home
emergency kit**

**A family
communicatio
n plan**

**Do not risk
crossing water**

**Call 999 in case
of danger**

Note: Flood danger can appear quickly — do not underestimate flowing or accumulated water

The Main Risks of Heavy Rain and Floods

Multiple risks on roads and in areas

Water accumulation on roads

Floodwater flowing in valleys

Reduced visibility

Vehicles skidding

Objects flying in the wind

Power outages

Water entering homes

Awareness Message: Flowing water may look harmless, but it can be powerful and dangerous

Following official alerts

The basis for making the right decision

**Official
channels**

**Do not rely on
rumors**

**Postpone trips
when there is a
warning**

**Inform the
family of
updates**

**Adhere to the
instructions**

**Early
preparation
before it
intensifies**

Important Message: An official alert is not just to watch — it is to take an appropriate preventive action

Preparation Inside the Home

Reducing risks before the weather event

**Securing
outdoor items**

**Ensuring
proper water
drainage**

**Keeping
appliances
away from
water**

**Charging
essential
devices**

**Preparing a
flashlight**

**Knowing how
to cut the
power**

**Basic supplies
for the family**

Note: Do not touch any electrical source if it is near water or moisture

Safety of Children, the Elderly, and People of Determination

Special supervision during weather events

**Keep children
inside the
home**

**Keep them
away from
water**

**Checking on
the elderly**

**A plan for
people of
determination**

**An effective
means of
communicatio
n**

**Do not leave
them alone**

Awareness Message: Children may be drawn to accumulated water — direct supervision is essential

Safety While Driving in the Rain

Focus and a greater safe distance

No electronic devices while driving

5

Avoid roads where water accumulates

6

Stop safely when visibility is poor

7

Reduce your speed

1

Leave a greater safe distance

2

Use appropriate lights

3

Avoid sudden braking

4

Note: Arriving late is better than risking an unsafe road

Not Crossing Accumulated Water

One of the most dangerous behaviors in floods

The depth may be greater than it appears

1

The road under the water may be damaged

2

The vehicle may lose its balance

3

A strong water current is possible

4

Hidden openings and obstacles

5

Risk of the vehicle being swept away

6

Look for a safe alternative route

7

Urgent Action: Do not cross the water — wait for the danger to pass or find a safe route

Valleys and Floodwater Channels

They fill quickly even if the rain is far away

Do not enter valleys during a warning

1

No stopping or camping in the watercourse

2

Do not approach the edges of the channels

3

Do not film the flood up close

4

Keep children away from the water

5

Leave low-lying areas

6

Call 999 if anyone is trapped

7

Important Message: A flood can arrive suddenly — staying away from its channels is the best means of safety

Strong Winds and Dust

Impact on visibility and flying objects

Stay away from trees

Bring in or secure items

Close windows and doors

Avoid driving when necessary

Reduce speed in dust

Do not stop in the path of the road

A safe place to stop

Note: Flying objects can cause injuries — prevention starts with securing the surroundings

Power Outages or Water Entry

A dual hazard that requires caution

Do not touch wet sockets

1

Do not switch on electricity when there is water

2

Cut the source from a dry place

3

Keep children away from water and electricity

4

No generators inside the home

5

Contact the specialists if there is a problem

6

Call 999 in case of danger

7

Important Message: Water and electricity are a major hazard — do not deal with them without safety and specialists

What to Do with Trapped People or Stranded Vehicles

Random rescue is dangerous

Do not approach the watercourse

Call 999 immediately

Specify the location precisely

Do not tow a vehicle without specialists

Move away from the dangerous area

Follow the specialists' instructions

Note: A random rescue attempt can turn the rescuer into a second victim

Safety in Schools and Public Facilities

Clear procedures during a weather event

Following the alerts

Canceling outdoor activities

Keep students away from danger

Keeping corridors free of water

Preventing crowding near windows

A plan for power outages

Calm guidance for the public

Awareness Message: Public safety starts with an early administrative decision when there are weather warnings

After the Weather Event Ends

Danger may persist after the rain

**Do not rush to
go out**

**Avoid areas
submerged in
water**

**Do not touch
fallen wires**

**Inspect the
home carefully**

**No children
playing in the
water**

Report hazards

**Follow the
specialists'
instructions**

Note: The end of the rain does not mean the danger has ended immediately

Wrong Behaviors During Floods

Actions that increase the danger

**Crossing
valleys and
water**

**Filming floods
from danger**

**Driving fast in
the rain**

**Stopping in
tunnels**

**Approaching
wires**

**Children
playing in the
water**

**Ignoring the
alerts**

**Spreading
rumors**

Important Message: Curiosity or haste during floods can lead to great danger

The Family's Role in Risk Management

Preparation and action together

**Following the
alerts**

**Preparing
supplies**

**A way for the
family to
communicate**

**Educating the
children**

**Securing
outdoor items**

**Knowing how
to cut the
power**

**The number
999 in a visible
place**

Awareness Message: A prepared family reduces confusion and protects its members during an emergency

The Role of the Community and Facilities

Cooperation that protects everyone

**Reporting
water
accumulation**

**Reporting
electrical
faults**

**No obstruction
of response
teams**

**No crowding
around the
danger**

**Guidance away
from valleys**

**Supporting
vulnerable
groups**

**Sharing official
information**

Important Message: Community cooperation during weather events helps protect everyone

Do's and Don'ts in Weather Conditions

Correct Practices and Others to Avoid

Don't ✕

- Do not cross flowing water
- Do not film floods up close
- Do not touch wet wires
- No children playing in the water
- Do not ignore the warnings
- Do not enter flooded tunnels
- No rescue without specialists

2

3

4

5

6

7

Do ✓

- Follow the official alerts
- Secure the home before the event
- Reduce speed in the rain
- Stay away from valleys and water
- Stay in a safe place
- Call 999 in case of danger
- Report hazards after the event

Interactive Scenarios

A practical application of what you have learned

Scenario 2

People are approaching a valley channel to film the flood

Correct Action: Warn them to move away, do not approach yourself, and call 999 in case of danger

Scenario 1

A road ahead of you is submerged in water and you think the vehicle can cross

Correct Action: Do not cross; look for a safe alternative route or wait until the danger passes

Scenario 4

After the rain, the children want to play in the accumulated water

Correct Action: Stop them — it may conceal openings, contamination, or an electrical hazard

Scenario 3

Water has entered near the electrical sockets in the home

Correct Action: Move people away, do not touch the appliances, cut the power from a dry place, and request help

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: What is the most important measure before severe weather?

Answer: Following official alerts, securing the home, and avoiding going out during warnings

Q2: Is it acceptable to cross accumulated water with a vehicle?

Answer: No, the water's depth or the current's strength may not be clear, and the vehicle may be swept away

Q3: What do you do when a person is trapped by the flood?

Answer: Call 999 immediately, specify the location precisely, and do not attempt a rescue without specialists

Q4: Why does danger persist after the rain ends?

Answer: Because the roads are damaged, water is accumulated, and there may be electrical faults or hidden obstacles

Thank You

Prevention and staying away from danger are the safest path

Do not cross water • Stay away from valleys • Follow the alerts • Call 999 in case of danger

"In weather events and floods, prevention and staying away from danger are the safest path"
