

Managing Drowning Cases

Quickly Requesting Help and Protecting the Rescuer

"Drowning can happen quickly and quietly — avoid any rescue attempt that puts you in danger, and request help immediately"

Why Do We Care About Drowning Cases?

They can happen quickly and without clear screaming

Protecting Lives
in the Water

Reducing Delay
in Requesting Help

Preventing a Rescue
That Is Unsafe

Monitoring Children
Near Water

Community Awareness
of Water Risks

A Correct Response
During an Emergency

Remember: When there's a drowning case or a suspected danger in the water, call 999 immediately

What Is Meant by Drowning?

A serious difficulty breathing caused by water

Home pools

Beaches

Ponds and
tanks

Rainwater
pools

Marine
activities

Children's
bathtubs

Note: Even a small amount of water can be dangerous for children — don't leave them unsupervised near any water

The Groups Most at Risk

They need supervision and extra precautions

Children

Non-swimmers

The elderly

People of
Determination

Exhaustion or
dizziness

Activities
without
protective
equipment

Swimming in
non-
designated
areas

Awareness Message: Having an adult supervising doesn't mean being distracted — supervision must be continuous and direct

Danger Signs in the Water

They may not call for help out loud

Difficulty staying above the water's surface

1

Irregular movement in the water

2

Inability to reach the edge

3

A child disappearing, even for seconds

4

Remaining still and unresponsive

5

Coughing after coming out

6

Fatigue or confusion after swimming

7

Correct Action: Request help immediately, and don't wait until the condition deteriorates

The Basic Rule When You See a Drowning Case

Don't put yourself in danger

Don't enter the water if you're not trained

4

Call for help loudly

1

Use a safe device from outside

5

Call 999 immediately

2

Disperse the onlookers

6

Call a lifeguard

3

Important Message: An untrained rescuer can become a second victim if they enter the water unsafely

Helping From Outside the Water

Safer if they're close to the edge

**Call to them
and guide
them to the
edge**

**Extend a long,
safe tool**

**Throw a
flotation
device**

**Call the trained
lifeguard**

**Stay in contact
with them**

Note: Don't grab the person in a way that lets them pull you into the water, and don't enter a dangerous area without training

After Pulling the Person Out of the Water

A quick assessment and requesting help

No food for someone unconscious

5

Keep them in a safe position

6

Follow the emergency operator's instructions

7

Make sure the area is safe

1

Check the person's responsiveness

2

Check for normal breathing

3

Call 999

4

Important Message: Even if they seem better, monitor them and request help at any difficulty breathing, weakness, or confusion

If the Person Is Unresponsive

An emergency requiring immediate intervention

Make sure the area is safe

1

Call 999 immediately

2

Check for normal breathing

3

No food or drink

4

Start CPR if you're trained

5

Ask for an AED to be brought if available

6

Follow the emergency operator's instructions

7

Note: Don't leave the person alone, and don't delay calling emergency services

If They Are Breathing but Exhausted or Confused

Act carefully and with monitoring

Sit them in a safe place

Reassure them and stay with them

Monitor breathing and responsiveness

Keep them warm

Don't let them go back to swimming

Call 999 if it persists

Important Message: Any difficulty breathing after a water incident must be taken seriously

Children After Drowning or Near-Drowning

Close monitoring even if they appear to be improving

**Don't leave
them alone**

**Monitor
breathing and
coughing**

**Watch for any
change in
consciousness**

**They don't
return to the
water**

**Call 999 in case
of danger**

**Inform the
specialists of
what
happened**

Note: A child's safety after coming out of the water doesn't mean ignoring follow-up and monitoring

Drowning at Beaches

Currents and waves require extra caution

**Swimming in
designated
areas**

**Following the
warning signs**

**No swimming
when the flags
are raised**

**Don't swim
alone**

**Constant
attention to
children**

**No swimming
when
exhausted**

**Requesting
help
immediately**

Awareness Message: Following beach guidelines reduces risks and protects everyone

Drowning in Home Pools

Clear prevention measures when children are present

**Direct
supervision of
children**

**Barriers and
safety devices**

**Closing the
gates after use**

**Keeping toys
away from the
edge**

**Teach the child
the rules**

**Rescue
equipment
nearby**

**The 999
number in a
visible place**

Note: The presence of floats or water toys doesn't replace adult supervision

Prevention During Trips and Water Activities

Advance preparation for safety

**Life jackets
when needed**

**Activity
suitable for
one's ability**

**Designated
areas only**

**Monitoring the
weather**

**Avoiding
exhaustion
before
swimming**

**Following the
supervisors'
instructions**

**Don't leave
children
unattended**

Important Message: Enjoying the water must come with a clear commitment to safety measures

What Not to Do in Drowning Cases

Actions that may increase the danger

Don't enter the water without training

Don't swim toward them without safety measures

Don't leave them alone after pulling them out

No food for someone unconscious

They don't return to swimming after the incident

Don't crowd around them

Don't delay calling 999

Awareness Message: Safety begins with protecting yourself, then requesting help and organizing the area

Signs That Call for Contacting Emergency Services

Call 999 immediately when these signs appear

A change in the color of the face or lips

5

Loss of consciousness or weak responsiveness

1

Severe weakness or abnormal fatigue

6

No normal breathing

2

Chest pain or deterioration

7

Difficulty breathing or continuous coughing

3

An incident involving a child or an elderly person

8

Confusion or unusual drowsiness

4

Important Message: When in doubt, request help immediately and don't wait for the condition to deteriorate

The Role of Those Present at the Scene

Quick organization of the response

Someone calls
999

Someone calls
the lifeguard

Someone
brings a
flotation
device

Someone
disperses the
onlookers

Someone
clears the way
for the
ambulance

Someone
monitors
breathing

Important Message: Organized cooperation is faster and safer than random individual action

General Drowning Prevention

The most important step to protect lives

Learning to swim

Direct supervision of children

Life jackets when needed

Designated and supervised areas

Following the warning signs

No swimming when exhausted

Don't rely on floats

The 999 number near pools

Note: Drowning can happen quickly and quietly — there's no substitute for direct supervision

Do's and Don'ts in Drowning Cases

Correct Practices and Others to Avoid

Don't ×

Don't enter the water without training

1

Don't put yourself in danger

2

No food for someone unconscious

3

They don't return to the water after the incident

4

Don't rely on floats

5

Don't ignore coughing

6

Don't film or post the case

7

Do ✓

Call 999 immediately

1

Call the lifeguard

2

Use a safe flotation device

3

Monitor breathing after pulling them out

4

Start CPR if you're trained

5

Prevent crowding

6

Monitor children regularly

7

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2

A person in the sea is in difficulty far from the shore

Correct Action: Call the lifeguard immediately, call 999, and don't enter the water without safety measures

Scenario 1

A child disappeared for seconds then was found inside the home pool

Correct Action: Pull them out if it's safe, call 999 immediately, and monitor breathing and responsiveness

Scenario 4

People gathered around the person after pulling them out

Correct Action: Disperse the onlookers, provide space, and clear the way for the response teams

Scenario 3

A person came out with continuous coughing and severe fatigue

Correct Action: Keep them in a safe place, monitor breathing, don't let them swim again, and call 999

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: What is the first action when you see a person in difficulty in the water?

Answer: Requesting help immediately, calling 999, and not putting yourself in danger

Q2: Is it acceptable to enter the water to rescue someone without training?

Answer: No, calling the lifeguard and using a safe device is the correct action

Q3: When do we start CPR after a drowning incident?

Answer: If they're unresponsive and not breathing normally, if you're trained or as directed by the operator

Q4: Why don't we allow returning to swimming right away?

Answer: Because the condition may deteriorate and breathing difficulty may appear after coming out, requiring assessment

Thank You

Quickly requesting help, protecting the rescuer, and continuous monitoring can save a life

Don't enter the water without training • Call 999 immediately • Monitor children • Teach swimming

"In drowning cases, quickly requesting help and acting safely can save a life"
