

Preventing Battery Fires

Safe charging... and responsible use

"Batteries are part of our daily life, but misusing or charging them unsafely can cause serious hazards"

Why Do We Care About Battery Safety?

Batteries can become a source of danger when damaged or charged unsafely

Preventing fires

the most serious
battery risk

Reducing overheating

during charging and
use

Protecting children

from small batteries

Protecting property

and home appliances

Safe behavior

during charging and
storage

Choosing certified products

avoiding unreliable
products

Remember: Correct use starts with choosing a safe product and following the manufacturer's instructions

Key Battery Risks

They appear when using a damaged battery or an unsuitable charger

**Battery
overheating**

**Battery
swelling**

**Chemical
leakage**

**Uncertified
chargers**

**Charging on
flammable
surfaces**

**Leaving
charging
unattended**

**Exposure to
direct heat**

Message: Signs of damage or abnormal heat must not be ignored

Safe Charging of Electronic Devices

Charging needs a suitable spot and monitoring

**Use an original
or certified
charger**

**Charge on a
stable, non-
flammable
surface**

**Don't place the
device under
pillows**

**Avoid charging
near heat
sources**

**Unplug the
charger after
charging is
complete**

**Don't use a
damaged
charger**

**Stop use at
abnormal heat**

Remember: Safe charging reduces the risk of overheating and fires

Signs of Battery Damage

Signs indicating the battery is unsafe

Cracks or visible damage

5

Difficulty charging

6

Abnormal noise

7

Repeated sudden shutdowns

8

Battery swelling

1

Abnormal heat

2

Burning smell

3

Fluid leakage

4

Important Message: Stop use, unplug the device safely, and move it away from flammable materials

Safe Battery Storage

Proper storage reduces the chance of damage and overheating

**In a dry, cool
place**

**Away from
sunlight**

**Away from
flammable
materials**

**Don't mix good
ones with
damaged ones**

**Out of
children's
reach**

**Don't mix
metals with
them**

**Follow the
manufacturer's
instructions**

Remember: Careless storage can turn a battery into a source of danger

Children's Safety Around Batteries

Small batteries can pose a danger to children

Keep batteries in a closed place

1

Make sure the battery cover is closed

2

Don't leave batteries on tables

3

Keep chargers away from children

4

Don't let children play with them

5

Seek help in case of swallowing

6

Teach them the danger of batteries

7

Message: Small batteries are not toys and must be kept away from children

Bike and Large-Device Batteries

They need extra care due to their size and capacity

Don't leave charging unattended

5

Don't modify the battery or charger

6

Keep them in a safe, ventilated spot

7

Unplug charging when complete

8

Use the dedicated charger

1

Don't charge in exit corridors

2

Keep them away from furniture

3

Inspect after a fall or damage

4

Remember: Don't let a large battery being charged block an exit route

Safe Battery Disposal

Improper disposal can cause fires and environmental hazards

Don't throw them in regular waste

Use recycling points

Cover the terminals with insulating tape

Don't puncture the battery

Don't open or disassemble it

Keep damaged ones in a safe place

Notify specialists about large ones

Message to Employees: A damaged battery needs careful handling even after you stop using it

Preventing Charging Fires

Choose a suitable charging spot and monitor the device

Charge in a well-ventilated place

Avoid charging on sofas

Don't charge near flammable materials

Don't cover devices while charging

Don't use an unsuitable charger

Unplug at any heat or smell

Message: Choose the charging spot as you would a safe spot for any heat source

The Groups Most Exposed to Battery Risks

Some groups need extra care

Children

Risk of swallowing and playing

The elderly

Difficulty noticing the signs

People of Determination

Reliance on medical devices

E-bike riders

Daily handling of large batteries

Home appliance users

Continuous charging monitoring

Repair workshops

Handling damaged batteries

Message: Safe behavior protects each group from the risks linked to it

What Do You Do if the Battery Overheats or Smoke Appears?

Act quickly and carefully

Stop using the device immediately

Unplug the charger if it's safe

Move the device away from materials

Don't touch the hot battery

Don't put the device under water

Move people away from the site

Go out to a safe place

Call 999 in case of danger

Remember: Don't try to handle a damaged or hot battery randomly

Special Cases in Battery Use

Some uses call for extra caution

**E-bike
batteries**

**Scooter and
toy batteries**

**Batteries on
trips**

**Backup
charging
batteries
(power banks)**

**Batteries in
high
temperatures**

**Batteries after
a fall**

**Medical device
batteries**

Important Message: Every battery has a suitable use environment that must be followed

Communication and Reporting in a Battery Fire

A clear report speeds up the arrival of help

Example of a clear report:

"There is smoke from an e-bike battery on the second floor, and the site has been evacuated"

State the
location
precisely

Mention the
type of device

Report the
injured

Avoid spreading
unconfirmed
information

Remember: An accurate report saves lives and speeds up the arrival of help

Do's and Don'ts in Battery Safety

Correct Practices and Others to Avoid

Don't ×

- Don't use a swollen battery
- Don't charge under pillows
- Don't use a damaged charger
- Don't charge near flammable materials
- Don't disassemble the battery
- Don't ignore smoke or heat
- Don't leave it unattended

1

2

3

4

5

6

7

Do ✓

- Use certified chargers
- Inspect before use
- Charge on a safe surface
- Keep batteries away from heat
- Store them away from children
- Dispose of them safely
- Call 999 when needed

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2

Someone is charging a device under a pillow

Correct Action: Stop this behavior and move the device to a stable, safe, ventilated surface

Scenario 1

You noticed that an electronic device's battery is swollen

Correct Action: Stop using the device, place it in a safe spot, and have it inspected by a specialist

Scenario 4

You noticed smoke from a device while charging

Correct Action: Cut the power safely, move away, and call emergency services if the danger continues

Scenario 3

The device's charger is cracked and shows signs of damage

Correct Action: Stop using it and replace it with a certified, suitable charger

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: Is it allowed to use a swollen battery?

Answer: No, you must stop using it immediately

Q2: Where is it best to charge electronic devices?

Answer: On a stable, non-flammable surface in a well-ventilated place

Q3: Is it allowed to charge a device under a pillow?

Answer: No, because that can lead to overheating

Q4: What do you do when you notice smoke from a charging device?

Answer: I move away, cut the power if it's safe, and ask for help

Q5: Why should a certified charger be used?

Answer: To reduce the risk of overheating, battery damage, and fire

Thank You

Preventing battery fires is everyone's responsibility

Certified charger • No pillows • Stop using damaged ones • Away from heat • Safe disposal • 999

"Safe charging and responsible use protect lives and property"
