

Managing Home and Kitchen Fire Risks

Daily prevention, home preparedness, and correct action

"Daily prevention is simpler and less costly than dealing with the consequences of a fire"

Why Do We Care About Managing Home Fire Risks?

Home safety is a daily responsibility

Protecting lives

inside the home

Reducing the likelihood

of a fire breaking out

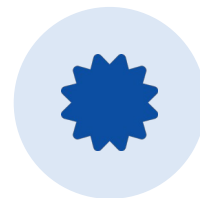

Preventing the spread

at the outset

Protecting children and the elderly

Family readiness

for emergencies

Reducing losses

in property

Remember: Risk management means preventing the causes before they happen, not waiting for the fire to occur

What Is Meant by Managing Home Fire Risks?

A continuous process to identify and reduce risk

**Identifying
ignition
sources**

**Keeping
flammable
materials away**

**Monitoring the
safety of
appliances**

**Preparing
alarm systems**

**Training the
family**

**Calling 999 in
case of danger**

Note: Daily prevention is simpler and less costly than dealing with the consequences of a fire

The Main Sources of Danger in the Kitchen

The place with the most concentrated heat sources

**Leaving
cooking
unattended**

**Overheating of
oils**

**Towels and
papers near
the stove**

**Faulty cooking
appliances**

**Overloading
sockets**

**Being
distracted by
devices**

**Children
tampering with
the knobs**

Awareness Message: Supervision while cooking is the first line of defense against kitchen fires

Oil Hazards While Cooking

Oil fires are among the most dangerous kitchen fires

Do not leave oil unattended

1

Do not raise the heat more than needed

2

Use stable cookware

3

Keep children away from the stove

4

Keep flammable materials away

5

Turn off the stove when smoke appears

6

Important Note: Do not use water on oil fires — the fire may spread and the danger increase

Gas Safety Inside the Home

Monitoring, maintenance, and safe use

Safety of connections

Turning off the gas after use

Do not ignore the smell of gas

Do not switch on electricity during a leak

Ventilate the area if possible

Periodic inspection by specialists

Keep children away from the knobs

Correct Action: Move away, avoid any spark, and call 999 in case of a gas leak

Electrical Hazards in the Home

Faults that can start a fire

**Overloading
sockets**

**Damaged
wiring**

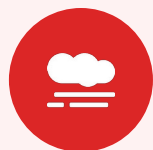

**Appliances
near water**

**Leaving
appliances
unattended**

**Unapproved
chargers**

**Heat or a
burning smell**

**Repairs by
non-specialists**

Important Message: Any burning smell or spark requires stopping use and inspection by a specialist

Flammable Materials in the Home

Their presence near heat increases the danger

**Towels near
the stove**

**Papers and
cardboard**

**Curtains near
heat**

**Cleaning
materials**

**Pressurized
sprays**

Oils and liquids

**Furniture near
heaters**

Preventive Guidance: Keep flammable materials away from heat and in safe places

Smoke Alarms

An early warning that gives time to get out

**Install in
suitable
locations**

**Test the device
periodically**

**Change the
batteries**

**Do not disable
the device**

**Teach the
family what
the sound
means**

**Take the alarm
seriously**

Awareness Message: An early alarm gives the family a chance to get out before the smoke or fire spreads

The Home Fire Extinguisher

It helps with a very small fire at its outset

**A clear,
accessible
location**

**Periodic
validity check**

**Know how to
use it**

**Not for large
fires**

**Immediate
evacuation in
case of danger**

**People's safety
first**

Important Note: The priority is always people's safety, not saving property

The Home Escape Plan

It speeds up the response during an alarm or fire

Teach children not to hide

5

Agree not to go back

6

Call 999 from a safe place

7

Identify the exits of each room

1

Identify two routes out

2

Designate an outdoor assembly point

3

Train the family on the plan

4

Important Message: A plan that has not been practiced may not be effective during an emergency

Protecting Children and the Elderly

The most vulnerable groups during fires

**Keep children
away from the
kitchen**

**Do not leave
them near heat**

**Teach them not
to tamper**

**Keep cooking
utensils away
from the edge**

**The elderly's
access to exits**

**A plan for
those who
need help**

**Monitoring
appliances in
their rooms**

Awareness Message: Risk management means caring for those who cannot act quickly during an emergency

Wrong Behaviors That Increase the Risk

Simple but dangerous habits

**Leaving
cooking
unattended**

**Water on oil
fires**

**Overloading
sockets**

**Candles and
heaters left
unattended**

**Storing
flammables
near heat**

**Ignoring the
smell of gas**

**Allowing
children to
tamper**

**Returning
home after
evacuating**

Important Message: Safe behavior inside the home reduces risks before an emergency is needed

What to Do When a Fire Breaks Out in the Kitchen?

Act quickly and calmly

Close the door behind you

5

Call 999 from a safe place

6

Do not return to the home

7

Turn off the heat if it is safe

1

No water on oil fires

2

Do not move the burning pan

3

Evacuate the family members

4

Note: If the fire or smoke spreads, get out immediately and do not try to extinguish it

What to Do When Smoke Spreads?

Smoke can be more dangerous than flames

Head to the assembly point

5

Call 999

6

Do not go back in

7

Exit through the nearest safe exit

1

Stay low

2

Do not use the elevator

3

Close the doors behind you

4

Important Message: A quick, safe exit is more important than searching for belongings

Managing Risks Before a Fire Occurs

Daily preventive measures

**Inspect
appliances
periodically**

**Clean grease
buildup**

**Do not leave
the stove**

**Keep
flammables
away**

**Test the smoke
alarm**

**A suitable fire
extinguisher**

**Train the
family on the
plan**

**Educate the
children**

Awareness Message: A safe home is one where risks are reviewed before they turn into accidents

The Family's Role in Reducing Risks

Safety is a shared responsibility

**Responsible
for the alarm**

**Responsible
for turning off
the heat**

**Educate the
children**

**Helping the
elderly**

**Reviewing the
escape plan**

**An agreed
assembly point**

**999 in a visible
place**

Important Message: When each member knows their role, chaos decreases during an emergency

Do's and Don'ts in Home Fires

Correct Practices and Others to Avoid

Don't ×

Do not leave food on the stove

1

No water on oil fires

2

Do not overload sockets

3

Do not ignore the smell of gas

4

Do not let children tamper

5

Do not fight a large fire

6

Do not return home after evacuating

7

Do ✓

Always supervise cooking

1

Keep flammables away from the stove

2

Inspect the electricity and appliances

3

Install and test the smoke alarm

4

Prepare an escape plan and an assembly point

5

Evacuate the home when it spreads

6

Call 999 from a safe place

7

Interactive Scenarios

A practical application of what you have learned

Scenario 2

The smoke alarm goes off during the night

Correct Action: Wake the family, carry out the escape plan, go to the assembly point, and call 999

Scenario 1

While cooking, the oil starts giving off visible smoke

Correct Action: Turn off the heat if it is safe, do not add water, and move people away from the area

Scenario 4

Someone wants to go back to get an item from the burning home

Correct Action: Stop them from going back, stay at the assembly point, and wait for the competent authorities

Scenario 3

You smell gas inside the kitchen

Correct Action: Avoid electrical switches, ventilate the area if safe, move away, and call 999

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: What is the most important measure to prevent kitchen fires?

Answer: Supervising cooking and not leaving food or oil on the stove unattended

Q2: Is it acceptable to use water on oil fires?

Answer: No, it may cause the fire to spread and increase the danger

Q3: What do you do when you hear the smoke alarm or see a spreading fire?

Answer: Carry out the escape plan, go to the assembly point, and call 999 from a safe place

Q4: Why do we designate an assembly point outside the home?

Answer: To make sure the family has gotten out and to prevent returning inside the home during the fire

Thank You

Prevention begins with awareness and daily commitment to safety measures

Supervise cooking • Inspect electricity and gas • Install the alarm • Call 999

"Preventing home fires begins with conscious daily behavior within every family"
