

Managing Vehicle Fire Risks

Regular inspection, approved maintenance, and correct action

"A vehicle fire rarely happens without warning signs — ignoring the signs is what increases the danger"

Why Do We Care About Managing Vehicle Fire Risks?

Fuel, oils, electricity, and high heat

**Protecting
passengers**
and road users

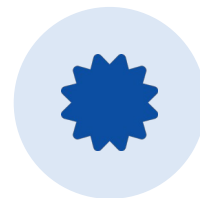

**Reducing the
likelihood**
or the spread

Detecting faults
before danger

**Preventing
breakdowns**
in dangerous places

**A culture of
inspection**
and maintenance

Reducing losses
in lives

Remember: Ignoring early signs is what increases the danger

What Is Meant by Managing Vehicle Fire Risks?

Identify the risk, reduce it, and be prepared

**Inspection
before use**

**Regular
maintenance**

**Attention to
smells and
leaks**

**No unapproved
modifications**

**A suitable
extinguisher**

Steps to take

**Call 999 in case
of danger**

Note: Risk management starts before driving, not only when a problem arises

The Main Causes of Vehicle Fires

Mechanical, electrical, or behavioral

**Electrical
faults**

Fuel or oil leaks

**Engine
overheating**

**Neglecting
maintenance**

**Unapproved
modifications**

**Traffic
accidents**

**Storing
flammable
materials**

Awareness Message: Most causes can be reduced through maintenance, inspection, and early attention

Electrical Faults in the Vehicle

Signs to watch for

Frequent fuse burnouts

Weakness in some systems

A smell of burning wires

Exposed or damaged wires

Heat in the connections

Unsafe add-ons

Correct Action: Stop using the suspected add-on and have the vehicle inspected by a specialist

Leaks and the Risk of Ignition

Signs that need immediate attention

Fluid stains under the vehicle

1

A clear smell of fuel

2

An abnormal drop in fluids

3

Smoke or steam from the engine

4

A burning smell after stopping

5

Oil traces in the engine compartment

6

Important Note: Do not use the vehicle if you suspect a fuel leak together with a burning smell

Engine overheating

Signs That Must Not Be Ignored

**A rising
temperature
gauge**

**Steam or
smoke from
the engine**

**A burning
smell**

**Poor vehicle
performance**

**Warnings on
the dashboard**

Correct Action: Stop safely, turn off the engine, move away if smoke appears, and request help

Unapproved Modifications

They affect safety and increase the risk

Unsafe lighting

Modifying the wiring

High-consumption devices

Mechanical parts

Unsuitable connectors or parts

Tampering with the battery

Important Message: Any modification must be done through a specialist and in accordance with approved technical requirements

Preventive Inspection Before Driving

Detecting warning signs early

No leaks under the vehicle

No smell of fuel or burning

Temperature gauges are normal

No smoke or steam

Tires are sound

No exposed wires

A suitable extinguisher

Awareness Message: A short inspection before driving can prevent a dangerous situation on the road

Regular Maintenance and Risk Management

It reduces sudden breakdowns

The engine and cooling system

The battery and electrical system

The fuel system

Oils and fluids

Brakes and tires

Any warning on the gauges

Approved parts

Note: Delaying maintenance can turn a minor fault into a greater hazard

The Fire Extinguisher Inside the Vehicle

For small fires at their outset

**A clear,
accessible
location**

**Periodic
validity check**

**Know how to
use it**

**Not for large
fires**

**Do not
approach thick
smoke**

Evacuate first

Important Message: The extinguisher is a helpful tool, but it does not come before saving lives

Flammable Materials Inside the Vehicle

Especially in hot weather

Fuel containers

**Pressurized
sprays**

**Cleaning
materials**

**Lighters in the
heat**

**Damaged
batteries**

**Chemical
substances**

Preventive Guidance: Do not use the vehicle as a place to store hazardous materials

Safety When Stopping and Parking

Choosing a safe location

**Do not park
over dry grass**

**Do not run it in
an enclosed
space**

**Watch for
smells after
stopping**

**Turn off the
engine before
leaving**

**No flammable
materials**

**Inspect if there
is smoke or a
leak**

Note: Choosing a safe parking spot is part of managing vehicle risks

Smoke Appearing While Driving

Act quickly and calmly

Get all passengers out

5

Move away from the vehicle

6

Call 999 in case of danger

7

Reduce speed gradually

1

Use the hazard lights

2

Stop in a safe place

3

Turn off the engine immediately

4

Important Note: Do not return to the vehicle to retrieve belongings after evacuating

What to Do in a Vehicle Fire?

Protect people and move away

Stop in a safe place

1

Turn off the engine

2

Evacuate passengers immediately

3

Move away from traffic

4

Call 999

5

Do not open the engine hood

6

Do not fight a large fire

7

Important Message: A vehicle can be replaced, but lives cannot

Managing Risks After a Traffic Accident

Fuel and electrical damage increases the risk

Stop the vehicle safely

Hazard lights

Evacuate passengers to a safe place

Move away if there is a fuel smell

Do not touch the wires

Do not crowd

Call 999 in case of danger

Note: Even if a fire does not appear immediately, there may be hazards requiring specialist assessment

The Responsibility of the Driver and Passengers

Risk management starts with the driver

**Keeping up
with
maintenance**

**Not ignoring
warnings**

**Stopping when
there is smoke**

**Not loading
hazardous
materials**

**Knowing the
location of the
extinguisher**

**Educating
passengers**

**Reporting any
smell**

Important Message: Risk management is a shared responsibility, but it starts with the driver

Do's and Don'ts in Vehicle Fires

Correct Practices and Others to Avoid

Don't ×

- Do not ignore the temperature gauges
- No unapproved modifications
- Do not store fuel inside the vehicle
- Do not park over flammable material
- Do not open the engine hood
- Do not return to it after evacuating
- Do not put yourself in danger

1

2

3

4

5

6

7

Do ✓

- Inspect the vehicle before driving
- Keep up with regular maintenance
- Address leaks and faults
- Keep a suitable extinguisher
- Stop when there is smoke
- Evacuate passengers and move away
- Call 999 in case of danger

Interactive Scenarios

A practical application of what you have learned

Scenario 2

You find a fuel or oil stain under the vehicle before setting off

Correct Action: Do not use the vehicle before having it inspected by a specialist, especially with a fuel smell

Scenario 1

While driving, you notice a burning smell and smoke from the engine

Correct Action: Stop safely, turn off the engine, evacuate passengers, move away, and call 999 in case of danger

Scenario 4

A small fire has started and the smoke quickly becomes thick

Correct Action: Do not approach or try to extinguish it, move to a safe place, and call 999

Scenario 3

After a minor accident, a fuel smell appears near the vehicle

Correct Action: Move passengers away, do not start it, prevent anyone from approaching, and call 999

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: What is the most important measure to prevent vehicle fires?

Answer: Preventive inspection, regular maintenance, and attention to leaks and smells

Q2: What do you do when smoke appears while driving?

Answer: Stop safely, turn off the engine, evacuate passengers, move away, and call 999

Q3: Is it acceptable to open the engine hood with thick smoke?

Answer: No, it may increase the danger — move away and request help

Q4: Why do we not return to the vehicle after evacuating?

Answer: Because the fire can develop quickly, and people's safety is more important than property

Thank You

Prevention begins with awareness and daily commitment to safety measures

Inspect before driving • Regular maintenance • Stop when there is smoke • Call 999

"A safe vehicle starts with an aware driver who does not ignore the warning signs"
