

Safety from Heat Exhaustion and Sunstroke

For pilgrims — prevention and correct action

"Preventing heat illness is easier and faster than dealing with its complications"

Why Do We Care About Heat Exhaustion?

Crowds, long walking, and intense heat

Protecting the health

of pilgrims

Reducing cases

of fainting and fatigue

Preventing the condition from developing

into sunstroke

Helping the elderly

and those with chronic illnesses

Preparedness and safety

during the rituals

A fast response

in case of danger

Remember: Preventing heat illness is easier and faster than dealing with its complications

What Is Heat Exhaustion?

Body fatigue due to heat and fluid loss

**Long walking
in the sun**

**Severe
crowding**

**Not drinking
enough water**

**Unsuitable
clothing**

**Exertion
without rest**

**Ignoring signs
of fatigue**

Note: Heat exhaustion can develop if it is not addressed early

What Is Sunstroke?

A more dangerous condition than heat exhaustion

A severe rise in body temperature

1

Clear disorientation or confusion

2

Loss of consciousness or weak response

3

Severe headache and dizziness

4

Stopping of sweating and hot skin

5

Convulsions

6

Rapid deterioration — call 999

7

Urgent Action: Call 999 immediately and start cooling the casualty in a safe manner

The Groups Most Vulnerable to Risk

They need extra care and prevention

The elderly

Children

Those with
chronic
illnesses

Those taking
certain
medications

People of
determination

Long exertion
without rest

Those who do
not drink
enough

Awareness Message: Accompanying and continuously monitoring these groups is an essential part of safety

Signs of Heat Exhaustion

Detect the condition before it deteriorates

**Fatigue and
general
weakness**

**Dizziness or
headache**

**Nausea and
discomfort**

**Heavy
sweating**

**Mild muscle
cramps**

Severe thirst

**Rapid pulse
and breathing**

Correct Action: Move them to a shaded place, give them rest, and water if they are conscious and able to swallow

Warning Signs That Require Emergency Services

Call 999 immediately

Convulsions

5

No improvement after rest and cooling

6

Symptoms in vulnerable groups

7

Loss of consciousness or weak response

1

Severe confusion or abnormal behavior

2

Difficulty breathing

3

Severe body heat

4

Important Message: Do not wait for the condition to deteriorate — at the serious signs, call 999 immediately

Drinking Water and Preventing Dehydration

The most important prevention steps

**Drink before
you are thirsty**

**Carry a bottle
of water**

**Do not neglect
it because of
the crowd**

**Watch the
elderly and
children**

**Take a rest
when tired**

Note: Severe thirst can be a sign that the body urgently needs fluids

Choosing Suitable Clothing

It helps the body relieve heat

Light, suitable clothing

Fabrics that allow ventilation

An umbrella or cover

Avoid heavy and tight clothing

Comfortable footwear

Awareness Message: Comfort and good ventilation reduce strain during movement and performing the rituals

Avoiding Direct Sun Exposure

Reducing the likelihood of strain

Use shaded areas

Reduce standing in the sun

Frequent rest periods

Avoid severe crowding

Safe cooling methods

Monitoring vulnerable groups

Important Message: Moving into the shade when feeling tired is a preventive step, not a delay

Planning Before Moving

It reduces fatigue and increases safety

**Know the route
in advance**

**Identify rest
points**

**Do not move
alone**

**Carry water
and medicines**

**Tell your
companions
about any
illness**

**Do not carry
heavy loads**

Note: Moving randomly in the crowd and heat makes it harder to request help when needed

The Role of Companions and Groups

Early noticing of signs of fatigue

Watching the elderly

Reminding to drink water

Organizing rest periods

Do not leave a tired person alone

Requesting help in case of danger

A clear assembly point

Awareness Message: Safety during Hajj and Umrah is a collective responsibility, not an individual one

What to Do at Signs of Heat Exhaustion?

Early action prevents it from developing

Water only for the conscious and able

5

Safe cooling and compresses

6

Call 999 if it is serious

7

Stop the exertion immediately

1

Move them to a shaded place

2

Help them sit down

3

Loosen heavy clothing

4

Note: Do not give water to a person who is unconscious or unable to swallow

What to Do When You Suspect Sunstroke?

An emergency — immediate help

Call 999 immediately

1

Move them to the shade if it is safe

2

Start cooling the body

3

Ventilation and cold compresses

4

No food or drink for the unconscious

5

Monitor breathing and response

6

Stay with them until the specialists arrive

7

Important Message: Sunstroke cannot wait — requesting help must be immediate

Mistakes to Avoid

Actions that increase the danger

**Ignoring
dizziness and
fatigue**

**Continuing to
walk with
symptoms**

**Leaving the
casualty alone**

**Water for an
unconscious
person**

**Delaying
calling 999**

**Exposing them
to the sun
while waiting**

**Crowding and
blocking
ventilation**

Awareness Message: The biggest mistake is treating severe symptoms as ordinary fatigue

Prevention During Crowds

Calm and organization

**Move calmly
without
stamping**

**No pushing at
the entrances**

**Use the
designated
routes**

**Stop to rest
when tired**

**Do not leave
the elderly and
children**

**Follow the
organizers'
instructions**

**Request help
early**

Important Message: Staying calm in the crowd protects you from strain and injuries

A Small Preparedness Bag

Simple supplies for prevention

**A bottle of
water**

**An umbrella for
the sun**

**Personal
medicines**

**A health
information
card**

**Contact
numbers**

**A simple
cooling item**

Note: Do not carry too many or heavy items — extra weight increases strain

Do's and Don'ts in Heat Exhaustion

Correct Practices and Others to Avoid

Don't ✕

- Do not keep walking while dizzy ①
- No long sun exposure without rest ②
- Do not leave a tired person alone ③
- No water for the unconscious ④
- Do not crowd around the casualty ⑤
- Do not delay calling emergency services ⑥
- Do not carry heavy loads ⑦

Do ✓

- Drink water regularly ①
- Use the shade while waiting ②
- Frequent rest periods ③
- Watch the vulnerable groups ④
- Clothing suitable for the weather ⑤
- Request help in case of danger ⑥
- Call 999 in case of sunstroke ⑦

Interactive Scenarios

A practical application of what you have learned

Scenario 2

An elderly person shows confusion and clear body heat

Correct Action: Call 999 immediately, move them to the shade if possible, and start cooling until the specialists arrive

Scenario 1

A pilgrim feels dizzy and very tired from the heat while walking

Correct Action: Stop them from walking, move them to the shade, let them rest, and give them water if they are conscious and able to swallow

Scenario 4

A person is unconscious and someone wants to give them water

Correct Action: Prevent giving them water, call 999, and monitor breathing until the specialists arrive

Scenario 3

A child feels very thirsty and tired after standing in the sun

Correct Action: Move them out of the sun, give them water, let them rest in a cool place, and monitor their condition

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: What is the first action for dizziness and severe fatigue due to heat?

Answer: Stop the exertion, move to a shaded place, rest, and drink water if conscious

Q2: When should you call 999?

Answer: At loss of consciousness, confusion, severe heat, or suspected sunstroke

Q3: Is it acceptable to give water to an unconscious person?

Answer: No, water must not be given to a person who is unconscious or unable to swallow

Q4: How do we reduce the risk of heat exhaustion during the rituals?

Answer: By drinking water regularly, taking rest periods, using the shade, and avoiding excessive exertion

Thank You

Awareness, preparedness, and not ignoring the signs of heat protect the pilgrim

Drink before thirst • Do not ignore dizziness • Use the shade • Call 999 in case of danger

"The pilgrim's safety begins with awareness, preparedness, and not ignoring the signs of heat"
