

Safety in School Laboratories

A safe experiment starts with commitment

"The laboratory is a place for learning and discovery, and following safety guidelines protects everyone"

Why do we learn laboratory safety?

Tools and materials that require attention and careful procedure

Protecting students

And teachers from injuries

Prevention

Of burns and cuts

Protecting equipment

And laboratory devices

Organized execution

Of educational experiments

Responsibility

And discipline inside the lab

Remember: Following instructions before starting an experiment is more important than speed

Before entering the laboratory

Proper preparation reduces the chance of accidents

**Follow the
teacher's
directions**

**Do not enter
without
permission**

**Tie back long
hair**

**No food or
drinks**

**No unrelated
items**

**Know the
emergency
exits**

**Pay attention
to warning
signs**

Message: Discipline before an experiment is part of its safety

Personal protective equipment

To reduce the risk of injury

Safety goggles

Protect the eyes

Gloves

Suitable for each experiment

Lab coat

Protects clothing and skin

Face mask

When needed

Closed-toe shoes

Protect the feet

Face shield

In specific experiments

Remember: Protective equipment is not optional when the teacher requires it

Safe handling of chemicals

Requires caution and constant supervision

**Do not touch
without
permission**

**Do not smell
substances
directly**

**Do not taste any
substance**

**Do not mix
randomly**

**Read warning
labels**

**Use the specified
amount**

**Keep them away
from your face**

Report any spill

Key rule: Do not use any chemical except as the teacher demonstrates

Handling glassware and sharp tools

Can cause injuries if used unsafely

Inspect before use

Do not use cracked glass

Carry glassware carefully

Place sharp tools in their proper spot

Do not point them at others

Report any breakage

Do not pick up glass with your hands

Message: Reporting damaged tools protects you and your classmates

Safety when using devices and heat sources

Requires constant supervision

**Do not operate
without
permission**

**Follow the
teacher's
instructions**

**Keep wires
away from
liquids**

**Do not touch
hot items
directly**

**Use handling
tools**

**Keep
flammables
away**

**Turn off after
finishing**

Remember: Heat sources and electrical devices require constant supervision

Safe behavior inside the lab

Organized behavior reduces risks

Stay calm

**Do not run or
move randomly**

**Do not joke
during
experiments**

**Do not touch
tools not
assigned to
you**

**Keep your
workspace
organized**

**Do not move
between
groups**

**Follow
instructions
step by step**

Message: The lab is not a place for joking or random experimentation

When a spill or breakage occurs

The right action prevents the danger from worsening

Do not pick up glass with your hands

5

Prevent others from approaching

6

Follow the teacher's instructions

7

Stop work immediately

1

Move away from the spill area

2

Tell the teacher right away

3

Do not touch the spilled material

4

Important message: Quick reporting is better than trying to handle the situation without knowledge

Safety equipment in the lab

Used only with the teacher's direction

Fire
extinguisher

Fire blanket

Emergency
shower

Eye wash
station

First aid kit

Emergency
exits

Guidance signs

Remember: Safety equipment is installed for use only when needed

What do you do if an injury occurs?

Act quickly and calmly

Tell the teacher immediately

1

Do not touch the items that caused it

4

Move away from the source of danger

2

Follow the nurse's instructions

5

Do not attempt treatment without guidance

3

Call 999 in emergencies

6

Message: Immediate reporting helps deliver the right help quickly

Do and Don't in the lab

Right practices and ones to avoid

Don't ✖

Do not enter the lab without permission

1

Do not handle substances randomly

2

Do not smell or taste substances

3

Do not mix without guidance

4

Do not run or joke

5

Do not use equipment without direction

6

Do ✔

Follow the teacher's instructions

1

Use protective equipment

2

Read warning labels

3

Keep your workspace organized

4

Report spills

5

Know the emergency exits

6

Interactive Scenarios

Practical application of what you learned

Scenario 1 A substance spilled on the lab table

Correct action: Move away from the spot and inform the teacher immediately

Scenario 2 You notice that a glass tool is cracked

Correct action: Do not use it, and inform the teacher or lab technician

Scenario 3 A classmate is trying to mix substances without permission

Correct action: Do not participate, and inform the teacher

Scenario 4 You feel eye irritation during the experiment

Correct action: Inform the teacher immediately and follow the eye wash instructions

Test your knowledge

Quick questions to assess your understanding

Q1: Is it allowed to handle chemicals without permission?

Answer: No, they may only be used with the teacher's direction

Q2: What do you do if a glass tool breaks?

Answer: Move away and inform the teacher; do not pick up glass with your hands

Q3: Is it allowed to bring food or drink into the lab?

Answer: No, to maintain safety and hygiene

Q4: Why do we use personal protective equipment?

Answer: To reduce exposure to injuries during experiments

Q5: What do you do if you notice a hazard in the lab?

Answer: Move away from the hazard and inform the teacher immediately

Thank you

Lab safety is everyone's responsibility

Don't enter without permission • Follow instructions • Wear protection • Don't mix substances • Report hazards

"A successful experiment is one that ends with safe learning"
