

Electrical Safety at Home

Safe use... a more protected home

"Electrical safety begins with proper use and ongoing inspection"

Why is electrical safety important?

Electricity is used daily and can become a source of danger

Fire prevention

Home fires

Reducing shocks

Electrical

Protecting children

And the family

Protecting appliances

And property

Preventive behavior

Inside the home

Remember: A minor electrical fault can become a major danger if not addressed

Top electrical hazards at home

Damaged appliances, overloading, unsafe use

Overloading outlets

Damaged wiring

Cords under carpets

Electricity near water

Unattended appliances

Non-approved chargers

Children tampering with outlets

Ignoring a burning smell

Message: Prevention starts by noticing warning signs and taking them seriously

Safe use of outlets and wiring

In a way that matches their capacity

**Don't overload
the outlet**

**Approved
connections**

**No damaged
wiring**

**No cords under
carpets**

**Unplug what's
not in use**

**Keep them
away from heat**

**Pull the plug,
not the cord**

Remember: Unsafe use of connections is one of the top causes of home fires

Safety when using electrical appliances

Operate and monitor per instructions

**Read the
manufacturer's
instructions**

**Do not use a
damaged
appliance**

Unplug after use

**Don't leave
heating items
unattended**

**Place them on a
stable surface**

**Keep them away
from children**

**Do not touch
with wet hands**

**Report
overheating**

Message: Using appliances properly protects the family and property

Electricity and water

A dangerous mix that increases shock risk

No appliances near water

Do not touch with wet hands

Keep chargers away from sinks

No cords on wet floors

Unplug the device if it gets wet

Inspect it before use

Important warning: Do not try to touch a wet appliance or one that is plugged in

Child safety from electrical hazards

Curiosity and unawareness of danger increase risk

Safety covers for outlets

Keep chargers away from children

No appliances without supervision

Don't let them insert objects

Keep heating items away from play areas

Store batteries safely

Message: Protecting children starts by limiting their access to hazards

Electrical warning signs

Signs of a fault needing specialist attention

Burning smell

**Heat in the
plug**

**Discoloration
of the outlet**

**Frequent
outages**

Unusual sound

**Flickering
lights**

Exposed wiring

Remember: Don't ignore small signs — they may be the start of a bigger danger

What do you do if you notice an electrical fault?

The right action reduces the chance of fire or shock

Don't use the appliance before inspection

5

Contact a certified specialist

6

Call 999 in immediate danger

7

Move away from the source of danger

1

Do not touch damaged wiring

2

Safely cut the power source

3

Move children away from the area

4

Important message: Do not try to fix electrical faults yourself if you are not a specialist

Electrical fire prevention

Starts with wiring and appliances

**Inspect wiring
regularly**

**Approved
appliances**

**Don't leave
heating items
unattended**

**Unplug when
not in use**

**No permanent
makeshift
connections**

**Keep
flammables
away**

**Maintenance
by specialists**

Warning: Do not use water on electrical fires

Charger and electronics safety

Need careful handling

**Original
approved
chargers**

**Don't charge
for long
periods**

**Don't cover
while charging**

**Keep them
away from
pillows**

**Stop using a
damaged
charger**

**Not in damp
places**

**Unplug it after
use**

Remember: A damaged charger can be a danger inside the home

Do and Don't in electrical safety

Right practices and ones to avoid

Don't ×

Don't overload outlets

1

No damaged wiring

2

No cords under carpets

3

Do not touch with wet hands

4

No water on electrical fires

5

Don't fix faults yourself

6

Do ✓

Inspect wiring regularly

1

Use approved appliances

2

Unplug what's not in use

3

Keep electricity away from water

4

Report warning signs

5

Protect children from outlets

6

Interactive Scenarios

Practical application of what you learned

Scenario 1 Unusual heat in an appliance plug

Correct action: Turn off the appliance safely, unplug it, and request an inspection

Scenario 2 Exposed electrical wiring

Correct action: Do not touch it, move children away, and contact a specialist

Scenario 3 Liquid near an electrical connection

Correct action: Move away, cut the power safely, and don't touch with wet hands

Scenario 4 A damaged or cracked charger

Correct action: Stop using it immediately and replace it with an approved charger

Test your knowledge

Quick questions to assess your understanding

Q1: Is it allowed to overload an outlet with multiple devices?

Answer: No, it can cause overheating or fire

Q2: What do you do if you smell burning near an appliance?

Answer: Move away, cut the power safely, and request an inspection

Q3: Is water allowed on an electrical fire?

Answer: No, because water can increase the risk of electric shock

Q4: Why don't we put cords under carpets?

Answer: Because they can be damaged or overheat without being noticed

Q5: What's the right action for exposed wiring?

Answer: Don't touch it, move children away, and call a specialist

Thank you

Electrical safety is everyone's responsibility

Don't overload outlets • Keep electricity away from water • Unplug what's unused • Approved chargers • 999

"Conscious use of electricity makes the home safer"
