

Safety in Camping and Desert Trips

A Safe Trip... Awareness of Risks

"Enjoying desert trips begins with good planning, following safety guidelines, and respecting the environment and facilities"

Why Do We Care About Safety on Desert Trips?

Open areas far from services require prior preparation and safe behavior

Fire Prevention

in Camps and BBQ
Areas

Reducing Injuries

and Avoiding Getting
Lost in the Desert

Protecting Children

and the Elderly at the
Site

Weather Preparedness

Monitoring Weather
Changes

Protecting the Environment

Preserving the Desert
and Facilities

Requesting Help

Facilitating Access in
Emergencies

Remember: Every safe trip begins before reaching the camp site

Before Going on the Trip

Advance planning reduces risks and helps in handling emergencies

Preparing a first aid kit

5

Providing sufficient water and food

6

Charging devices and providing backup power

7

Knowing the nearest route or assistance point

8

Choosing a safe and permitted camping site

1

Informing a close person of the trip location

2

Checking the vehicle's condition before setting off

3

Monitoring weather conditions and alerts

4

Message: Good preparation gives you a safer and more comfortable trip

Choosing the Camp Site

The wrong site can increase the risk of floods, fires, or accidents

Choose a level spot

Stay away from slopes

Avoid valley channels

Stay away from dry trees

Stay away from vehicle paths

Avoid power lines

Stick to designated sites

Remember: Make sure there's a safe distance between tents and heat sources

Fire Safety at the Camp

Heat sources can cause fires if used unsafely

Use fire in an open area

Keep fire away from tents

Don't leave fire unattended

Prepare water and sand for extinguishing

Don't light fire in the wind

Make sure embers are extinguished

Don't dump charcoal remains

Important Message: A small ember can turn into a large fire if left unattended

Safety Inside Tents

Tents are flammable, so fire and heat sources must be kept away from them

Don't use charcoal inside the tent

Keep heat away from the fabric

Keep the exit clear

Don't pile items near the entrance

Use safe lighting

Don't run wiring randomly

Keep children away from cooking

Remember: The tent is a place for rest; it must be away from heat sources and set up safely

Carbon Monoxide Prevention

A colorless, odorless gas; its buildup in closed spaces is lethal

Don't use charcoal inside the tent or vehicle

1

Don't use grills in a closed area

2

Don't run generators near tents

3

Place the generator in a well-ventilated area

4

Don't sleep near charcoal remains or smoke

5

Leave immediately if you feel a headache or dizziness

6

Seek help when you suspect danger

7

Message: Poisoning symptoms: headache, dizziness, nausea, fatigue — move to fresh air immediately

Electrical Safety at Camps

Temporary connections at the camp require constant monitoring and caution

Use certified wiring

Avoid damaged wiring

Keep wiring away from water

Don't run wiring across walkways

Don't overload the generator

Unplug unused devices

Don't touch electricity with a wet hand

Remember: Electricity at an open site is more exposed to moisture and damage — check it constantly

Children's Safety on Desert Trips

Open spaces require more supervision, not less

**Supervise
children
continuously**

**Keep them
away from fire
and grills**

**Set clear
boundaries for
them**

**Teach them to
stay with the
group**

**Don't leave
them near
roads**

**Dress them in
suitable
clothing**

**Teach them to
ask for help**

Message: Children are more prone to getting lost or injured in open sites

Safety While Driving in the Desert

Travelling in desert areas requires a well-prepared vehicle and careful driving

Don't leave the vehicle running near tents

5

Inspect the vehicle before the trip

1

Watch for children and pedestrians at the site

6

Make sure there is enough fuel

2

Keep emergency assistance tools

7

Avoid driving in unsuitable areas

3

Inform others when setting off alone

8

Avoid speeding and reckless driving

4

Remember: Safe driving is an essential part of trip safety

Dealing with the Weather and Surroundings

Weather can change quickly in desert areas

Avoid prolonged sun exposure

5

Drink water regularly

6

Wear weather-appropriate clothing

7

Stay away from unstable areas

8

Monitor the weather before and during the trip

1

Avoid camping in valley channels

2

Leave immediately upon a flood warning

3

Secure tents and equipment well

4

Message: Following weather alerts protects you from unexpected risks

First Aid and Requesting Help

A precise location helps emergency teams arrive quickly

Advice in Case of Injury:

"Move the injured person away from the source of danger if it's safe, and don't move them if the injury is serious"

Prepare a first aid kit

Save the emergency numbers

State your location precisely

Don't give first aid you're not trained in

Remember: Call emergency services on 999 in serious cases, and state your location clearly

Preserving the Environment and Site Safety

Leave the site safe and clean as you'd like to find it

**Put waste in
designated
bags**

**Don't leave
glass or sharp
objects**

**Extinguish
charcoal and
embers
completely**

**Don't damage
plants and
facilities**

**Don't bury
hazardous
materials**

**Keep the site
clean**

**Report any
hazard or fire**

Message: Responsible behavior preserves the environment and reduces risks to other visitors

Do's and Don'ts in Camping and Desert Trips

Correct Practices and Others to Avoid

Don't ✕

Don't use charcoal inside tents

1

Don't leave fire unattended

2

Don't camp in valley channels

3

Don't use damaged wiring

4

Don't drive fast near the camp

5

Don't leave waste at the site

6

Don't light fire in strong winds

7

Do ✓

Plan the trip before setting off

1

Choose a safe camping site

2

Keep fire away from tents

3

Supervise children continuously

4

Monitor the weather

5

Prepare a first aid kit

6

Extinguish embers completely before leaving

7

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2

The wind started to intensify near the camp

Correct Action: Secure the tents, extinguish fire sources, and follow official alerts

Scenario 1

You noticed someone lighting charcoal inside the tent

Correct Action: Stop them immediately, open ventilation, and move the heat source to a safe outdoor area

Scenario 4

Embers remained after finishing the barbecue

Correct Action: Extinguish it completely with water or sand and make sure it's cool before leaving

Scenario 3

A child wandered away from the camp site

Correct Action: Notify the group immediately and begin an organized search without leaving other children unsupervised

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: Is it allowed to use charcoal inside the tent?

Answer: No, because it may cause a fire or carbon monoxide poisoning

Q2: Where should fire or grilling take place?

Answer: In an open, safe place away from tents and flammable materials

Q3: Why don't we camp in valley channels?

Answer: Because they may be exposed to water flow or floods when the weather changes

Q4: What do you do before leaving the camp?

Answer: I make sure embers and fire are fully extinguished and clean the site

Q5: Why should you tell someone the trip location?

Answer: To facilitate access and assistance in emergencies

Thank You

Safety in camping and desert trips is everyone's responsibility

Plan before the trip • Choose a safe site • Keep fire away • Supervise children • In emergencies call 999

"A safe trip means a safe return and better memories"
