

Preventing Traffic Injuries

Your Commitment to Traffic Safety Protects You and Those Around You

"Traffic injuries can be reduced by following safety rules, using protective measures, and paying attention to road users"

Why Do We Care About Preventing Traffic Injuries?

Injuries affect the driver, passengers, pedestrians, and road users

Protecting Lives

and Reducing Injuries

Reducing Accident Severity

When They Occur

The Driver's Responsibility

Toward Himself and
Others

Protecting Children

and the Most
Vulnerable Groups

Raising Awareness

of Safe Traffic Behavior

Everyone's Safety

on the Road

Remember: Safe driving is not just a skill, but a responsibility toward the community

How Do Traffic Injuries Happen?

Unsafe behavior combines with poor attention

Not securing children in seats

5

Driving while fatigued

6

Ignoring pedestrians and bicycles

7

Not fastening the seatbelt

1

Using devices while driving

2

Speeding

3

Sudden stopping or lane changing

4

Note: Even minor accidents can cause injuries if protective measures aren't used correctly

The Seatbelt: The First Line of Defense

Use it on every trip, however short

Fasten it before the vehicle moves

1

Make sure all passengers are buckled

2

Don't place it behind your back or under your arm

3

Make sure it's fastened correctly

4

Children need an appropriate protective device

5

Essential in the front and rear seats

6

Awareness Message: A short distance doesn't mean the danger isn't there

Children's Safety Inside the Vehicle

Children are the most vulnerable group to risks in accidents

**A child seat
suitable for
age and weight**

**Installing the
seat per the
instructions**

**Children in the
rear seats**

**Don't hold the
child in your
lap**

**Don't leave the
child
unsupervised**

**Make sure the
doors and
windows are
closed**

**Teach the child
to fasten the
seatbelt**

Important Note: Holding the child by hand doesn't protect them during a sudden stop or accident

Speed and Safety Distance

Speeding reduces the driver's ability to react

**Comply with
the speed limit**

**Slow down in
school zones**

**Leave a
sufficient
safety distance**

**Increase the
distance in rain
and fog**

**Avoid sudden
stopping**

**Watch for
heavy vehicles**

**Respect other
road users**

Message: Speeding doesn't shorten the trip as much as it increases the chance of danger

Distraction While Driving

A few seconds of distraction can be enough for an accident to happen

**Using
electronic
devices**

**Writing or
reading
messages**

**Being
preoccupied
with
passengers or
children**

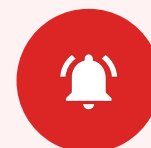

**Eating and
searching for
items**

**Adjusting
systems and
screens while
moving**

**Paying
attention to
things off the
road**

**Being
preoccupied
with
notifications**

Correct Action: Set your destination before setting off, and stop in a safe place if you need to use devices

Fatigue and Poor Focus

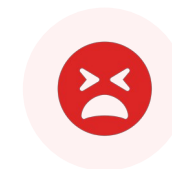

Driving while drowsy reduces attention and response

Preventive Guidelines

- Get enough rest before driving •
- Stop when you feel tired •
- Don't drive long distances without rest •
- Don't continue when your focus weakens •
- Consult a specialist if fatigue recurs •

Signs of Fatigue

- Frequent yawning •
- Poor focus and scattered attention •
- Difficulty staying in the lane •
- Slow response •
- Heaviness in the eyes •

Important Message: Stopping to rest is a safety decision, not an unnecessary delay

Protecting Pedestrians

Pedestrians are more prone to injury in accidents

**Slow down at
pedestrian
crossings**

**Stop for
pedestrians
when crossing**

**Watch for
children and
the elderly**

**Don't overtake
near crossings**

**Be careful
when reversing**

**Be careful in
public parking
areas**

**Extra caution
near schools**

For Pedestrians: Cross at the designated places, and avoid electronic devices while crossing

Safety of Cyclists and Scooter Users

Less protected than vehicle occupants; they need extra attention

**Use a helmet
and protective
gear**

**Stay in the
designated
lanes**

**Avoid blind
spots**

**Use lights and
reflectors**

**Obey the traffic
signals**

**Don't use
devices while
moving**

**Check the
vehicle's
condition**

For Drivers: Leave a safe distance when overtaking bicycles, and check the blind spots

Safety in Buses and Group Vehicles

Extra commitment due to the number of passengers and boarding and alighting

**Sit in the
designated
seats**

**Fasten the
seatbelt when
available**

**Don't stand
while the
vehicle is
moving**

**Don't put your
hand or head
out**

**Don't distract
the driver**

**Wait for the
stop before
getting off**

**Respect the
bus
instructions**

For the Driver: Make sure the doors are closed and passengers board and alight safely before moving

Visibility and Weather Conditions

Poor visibility or changing road conditions increase the chance of injuries

Reduce speed

**Leave a
greater safety
distance**

**Use the
appropriate
lights**

**Avoid sudden
lane changes**

**Extra caution
in the rain**

**Extra caution
in fog and dust**

**Stop if
visibility
becomes
insufficient**

Message: Driving in changing conditions requires calmness, a greater distance, and higher focus

Interior Cabin Safety

Organizing the cabin reduces injuries during a sudden stop

Secure items in the trunk

No sharp items on the seats

Don't block the view with luggage

Adjust the headrests

Don't put your feet on the dashboard

Sit in a safe position

Organize items and don't pile them

Note: Unsecured items can move forcefully during a sudden stop and cause injuries

Safety When Entering and Exiting the Vehicle

Safety doesn't end when the vehicle stops

Make sure the vehicle has fully stopped

Exit from the safe side

Watch for children when opening the door

Make sure the side is clear of bicycles

Don't stand between moving vehicles

Accompany children in parking areas

Check the mirrors before opening

Message: Safety continues until you reach a safe place outside the vehicle

The Correct Response When a Traffic Accident Occurs

Act calmly and avoid any behavior that increases the danger

Quick Steps During an Accident:

Call 999

Check on the
passengers

Turn on the signals

Stop safely

Don't stand in
the path of
vehicles

Don't move the
injured person
unless there's
danger

Don't crowd
around the
accident

Follow the
instructions of
the competent
authorities

Important Note: Crowding around the accident or standing in the road can lead to further accidents

Do's and Don'ts in Traffic Safety

Correct Practices and Others to Avoid

Don't ×

- Don't use devices while driving
- Don't seat children without protection
- Don't exceed the speed limit
- Don't tailgate other vehicles
- Don't open the door before checking
- Don't move the injured person unless there's danger
- Don't crowd at the accident site

2

3

4

5

6

7

Do ✓

- Fasten your seatbelt on every trip
- Use the appropriate child seat
- Comply with the speed limit
- Leave a sufficient safety distance
- Watch for pedestrians and bicycles
- Stop when you feel fatigued
- Call 999 in case of injuries

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2

A young child sitting without an appropriate safety seat

Correct Action: Use a child seat suitable for their age and size, and install it correctly

Scenario 1

One of the rear passengers refuses to fasten the seatbelt

Correct Action: Don't move the vehicle until all passengers fasten their seatbelts

Scenario 4

An accident happened ahead of you and people started crowding

Correct Action: Stay away from the path of vehicles, don't crowd, and call 999 if needed

Scenario 3

You received a message on your device while driving

Correct Action: Don't use the device, and stop in a safe place if a reply is necessary

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: Why should you fasten your seatbelt on every trip?

Answer: Because it protects the driver and passengers and reduces injury severity in accidents

Q2: What is the correct action when transporting a young child?

Answer: Use a child seat suitable for their age and size and install it correctly

Q3: What do you do if you feel fatigued while driving?

Answer: Stop in a safe place and take some rest

Q4: What is the action when an accident with injuries occurs?

Answer: Call 999, secure the area, and don't move the injured person unless there's danger

Thank You

Preventing traffic injuries begins with your simple decisions

Fasten the seatbelt • Comply with the speed limit • Watch for pedestrians • Avoid distraction • In case of injuries call 999

"Your commitment to traffic safety protects you and those around you"
