

Safety When Using Bicycles

Preparation Before Setting Off... and Commitment While Riding

"The bicycle is a useful and healthy means of transport, and it requires awareness and commitment to safety procedures to reduce the risk of falls and injuries"

Why Do We Care About Bicycle Safety?

A culture of safe use protects the rider and those around them

Reducing Injuries

Falls, Fractures, and Wounds

Protecting the Rider

from Road Risks

Sticking to the Lanes

Designated for Bicycles

Children's Awareness

and Youth of Safe Use

Protecting Pedestrians

and Other Road Users

Encouraging Sport

and Healthy, Safe Mobility

Remember: A bicycle is safe when a person uses it with awareness, preparation, and commitment

Key Risks of Using Bicycles

Poor preparation and lack of commitment increase the likelihood of injuries

**Falling due to
loss of balance**

**Colliding with
another
vehicle**

**Colliding with
pedestrians**

**Injuries from
not wearing a
helmet**

**Riding in
unsafe places**

**Poor visibility
at night**

**Using devices
while riding**

Note: Most risks can be reduced with a helmet, inspection, staying in the lane, and attention

Essential Protective Gear

It reduces injury severity during a fall or collision

The protective helmet

Gloves to protect the hands

Protective goggles

Reflective clothing

Suitable footwear

Lights and reflectors on the bicycle

Awareness Message: The helmet is not an optional extra, but an essential protective device when using a bicycle

The protective helmet

It reduces the risk of head injuries during a fall or collision

Choose a helmet suitable for the head size

1

Fasten the helmet securely without discomfort

2

Don't use a broken or damaged helmet

3

Replace the helmet after a strong impact

4

Don't ride without a helmet even for short distances

5

Encourage children to always wear it

6

Important Note: Head injuries can be serious, and prevention begins before getting on the bicycle

Inspecting the Bicycle Before Use

A minute of inspection can prevent a fall or injury

**Brake safety
and
responsiveness**

**Tire pressure
and no
cracking**

**Stability of the
seat and
handlebars**

**The chain's
condition and
movement**

No loose parts

The lights work

**The reflectors
are clear**

Message: A quick inspection before setting off helps detect faults before they turn into a danger

Choosing the Right Place to Ride

The designated lane is the safest option when available

Use the
designated
lanes

Avoid crowded
and high-speed
roads

Don't ride in
unsuitable
places

Avoid heavy
vehicles

Stay on the
safe side

Be careful in
pedestrian
areas

Note: The designated bicycle lane is the safest option when available

Complying With Traffic Rules

Respecting road rules like any other means of transport

Being attentive at intersections

5

Leaving a safe distance from pedestrians

6

Not riding recklessly or at high speed

7

Obeying traffic signals

1

Not going against the traffic direction

2

Using hand signals when changing

3

Not switching lanes suddenly

4

Awareness Message: Complying with the rules protects the cyclist and those around them

Hand Signals and Communicating With Others

They help others know the cyclist's intention

**When
changing
direction**

**When stopping
or slowing
down**

**When
switching
lanes**

**To alert those
behind you**

**Make sure the
road is clear**

**Signal clearly
and well before
the movement**

Note: Signaling doesn't mean the road is safe — you must confirm by looking before moving

Night Riding and Poor Visibility

The more visible you are to others, the lower the chance of accidents

Use a front and rear light

Wear reflective clothing

Put reflectors on the bicycle

Reduce speed in low light

Avoid unlit roads

Watch for pedestrians and obstacles

Important Message: The more visible you are to others, the lower the chance of an accident

Safety for Children and Teenagers

Guidelines for parents and supervisors

**Teach the child
in a safe place
first**

**A bicycle size
suitable for the
age**

**Mandatory
helmet and
protective gear**

**Staying away
from crowded
roads**

**Supervising
children in
parks**

**No electronic
devices while
riding**

**Teach them to
stop at
intersections**

Awareness Message: Teaching the child the right behavior protects them today and builds a safe habit for the future

Avoiding Distraction While Riding

A few seconds of distraction can cause a fall or collision

Using electronic devices

Wearing headphones that block sounds

Looking back repeatedly

Being preoccupied with talking or filming

Carrying items that hinder control

Correct Action: Stop in a safe place if you need to use a device before continuing to ride

Preventing Exhaustion and Dehydration

Fitness doesn't mean ignoring fatigue — rest is part of safety

**Drink sufficient
amounts of
water**

**Avoid long
riding in the
sun**

**Take rest
breaks when
tired**

**Wear weather-
appropriate
clothing**

**Stop when
severely dizzy**

**Plan the route
before setting
off**

Important Message: Fitness doesn't mean ignoring fatigue — rest is part of safety

What Do You Do in Case of a Fall or Injury?

Assess the situation calmly and don't rush to move

Quick Steps:

Call 999 when there's
danger

Don't move the injured
person if a fracture is
suspected

Check for pain or bleeding

Move away from the path
of traffic

A clean bandage
for minor
wounds

A cold compress
for bruises

Don't move a
head or neck
injury

Call 999 in case
of a serious
injury

Important Note: In case of head injuries, loss of consciousness, or severe pain, help must be requested immediately

Group Riding and Long Trips

More organization and attention when setting off as a group

**Set the route
before setting
off**

**Orderly riding
without
crowding**

**Protective gear
for everyone**

**Enough water
and rest
breaks**

**Reflective
clothing when
needed**

**Avoid unsafe
roads**

**A means of
tracking on
trips**

Awareness Message: Safe group riding requires organization, not just setting off together

Do's and Don'ts When Using a Bicycle

Correct Practices and Others to Avoid

Don't ×

- Don't use the bicycle without a helmet
- Don't use electronic devices
- Don't ride on highways
- Don't go against the traffic direction
- Don't overtake pedestrians at speed
- Don't carry items that hinder control
- Don't continue when dizzy or tired

1

2

3

4

5

6

7

Do ✓

- Wear the helmet every time
- Inspect the bicycle before use
- Use the designated lanes
- Comply with traffic rules
- Use lights and reflective clothing
- Use hand signals
- Drink water and take rest breaks

Interactive Scenarios

Practical Application of What You've Learned

Scenario 2

You're using the bicycle at night in a poorly lit area

Correct Action: Use front and rear lights, wear reflective clothing, and reduce speed

Scenario 1

A child wants to ride a bicycle in the neighborhood without a helmet

Correct Action: Don't allow them to ride without a helmet, and make sure of the protective gear and a safe place

Scenario 4

A person fell and complained of severe pain in the arm

Correct Action: Don't move the injured limb, request help, and call 999 if a fracture is suspected

Scenario 3

A notification arrived on your device while riding

Correct Action: Don't use the device while riding, and stop in a safe place if necessary

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: Why should you wear a helmet when using a bicycle?

Answer: Because it helps reduce the risk of head injuries during a fall or collision

Q2: Why are lights and reflective clothing important when riding at night?

Answer: To make the cyclist more visible and reduce the chance of a collision

Q3: What is the action when you need to use devices while riding?

Answer: Stop in a safe place, and don't use electronic devices while riding

Q4: What do you do when a person falls and a fracture is suspected?

Answer: Don't move the injured limb, stabilize it without pressure, and call 999 when needed

Thank You

Safety when using a bicycle begins with preparation before setting off

Wear the helmet • Inspect the bicycle • Stay in the lane • Watch the road • In case of injury call 999

"Use your bicycle mindfully; your safety starts with your decision before setting off"
