

Safety When Charging Electric Vehicles at Home

Approved Equipment... Proper Installation... Regular Inspection

"Home charging requires commitment to safety guidelines to reduce the risks of electrical faults, overheating, and fires"

Why Do We Care About Home Charging Safety?

High-voltage systems and batteries require careful handling

Protecting the home

from electrical faults

Reducing overheating

in cables and equipment

Fire prevention

and charging-related hazards

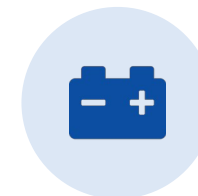

Protecting children

from tampering with equipment

Safe use

of modern technologies

Protecting the vehicle

and battery from damage

Remember: A home charger is not just an electrical connection, but a system that must be suitable, approved, and safe

How Can Charging Hazards Occur?

Ignoring warning signs can worsen the problem

**An unapproved
or
incompatible
charger**

**Sockets not
designed for
charging**

**Extension
cords and
multiple
connectors**

**Damage to the
cable or plug**

**Exposure of
equipment to
water and heat**

**Installation
without
checking
wiring capacity**

**Leaving
equipment
within reach of
tampering**

Note: Any minor charging fault can escalate into a hazard if ignored

Choosing the Right Charging Equipment

Charger quality is an essential part of vehicle and home safety

The charger recommended by the manufacturer

Compatible with the vehicle type

From trusted sources

Avoid unknown products

Clear usage instructions

Do not use damaged equipment

Awareness Message: The charger's quality and safety are an essential part of vehicle and home safety

Installing the Home Charger

Proper installation is not random, but done in an approved technical manner

Install the charger by a qualified technician

1

Match the wiring to the charger's capacity

2

Use a dedicated electrical circuit

3

Provide electrical protection devices

4

Choose a safe location for the charger

5

Follow the manufacturer's instructions

6

Important Note: Do not connect a high-power home charger without a proper electrical inspection

The Safe Charging Location

Choosing the right location reduces the risks of damage and tripping

Well ventilated

**Away from
flammable
materials**

**Away from
water
accumulation**

**Away from
heat sources**

**Does not
obstruct
people's
movement**

**A cable without
tension or
sharp bending**

**Out of
children's
reach**

Important Message: A safe charging location protects the vehicle, the home, and the people around it

Avoid Extension Cords and Connectors

Extension cords increase the risk of overheating and overload

Connecting through extension cords

Multiple or non-dedicated connectors

High-consumption devices together

Running cables across walkways

Damaged or loose sockets

Correct Action: Use a dedicated, approved charging point, and follow the manufacturer's instructions

Inspecting the Charger and Cable Before Use

A quick inspection reveals damage before a hazard occurs

**The cable is
intact without
cuts**

**No heat or
burning smell**

**The charging
port is clean**

**No water or
moisture on
the plug**

**A firm
connection
without
looseness**

**No damage to
the charging
unit**

Note: Do not use any cable or charger showing signs of damage or abnormal heat

During the Charging Process

Conscious monitoring of charging, not random use

Do not leave the cable in the pedestrian path

5

Keep children away from the equipment

6

Stop charging if there is a burning smell

7

Make sure the charger is connected correctly

1

Do not pull the cable forcefully

2

Do not touch the plug with a wet hand

3

Do not cover the charger or cable

4

Awareness Message: Safe charging requires conscious monitoring, not random use

After Charging Is Complete

Caring for equipment after use extends its lifespan

**Disconnect
according to
the
manufacturer's
instructions**

**Pull from the
designated
handle**

**Store the cable
without sharp
coiling**

**Do not leave it
in the path of
movement**

**Close the
charging port
cover**

**Inspect if there
is abnormal
heat**

Important Message: Caring for charging equipment after use extends its lifespan and reduces the likelihood of damage

Charging in Hot or Humid Conditions

Water and electricity do not mix safely

**Avoid
prolonged sun
exposure**

**Adequate
ventilation for
the location**

**Do not use wet
equipment**

**Inspect after
rain**

**Away from
heat sources**

**Stop if there is
a burning smell**

Note: Water and electricity do not mix safely — do not use wet or damaged charging equipment

Safety of Children and Family Members

Charging equipment is connected to high-voltage systems

**Keep children
away from the
cables**

**No connecting
or
disconnecting
by children**

**Organize the
cable to
prevent
tripping**

**A safe location
where it
cannot be
easily pulled**

**Teach the
family not to
touch it when
there is a fault**

**Keep the
charger
organized after
use**

Awareness Message: Family safety begins with organizing the charging area and preventing tampering with equipment

Warning Signs That Must Not Be Ignored

Signs that require immediate action

A burning smell or hot plastic

1

Heat in the plug or cable

2

Sparks or an abnormal sound

3

Frequent charging interruptions

4

Discoloration of the connection point

5

Damage or cracking in the cable

6

Smoke or an alarm from the charger

7

Urgent Action: Stop charging immediately if it is safe, move away from the source, and request inspection by a specialist

What to Do When There Is a Fault During Charging?

Avoid random actions and treat it as a potential hazard

Do not use the charger before inspecting it

5

Contact a specialized technician

6

Call 999 in case of immediate danger

7

Stop charging if it is safe

1

Do not touch the cable if there is smoke or sparks

2

Keep the family away from the charging area

3

Disconnect the power source safely

4

Important Note: Do not attempt to repair the charger or cable yourself

What to Do When a Fire Breaks Out During Charging?

The priority is evacuation, moving away, and requesting help

Quick Steps:

Call 999

Do not touch the cables

Move away from the source

Evacuate people

Do not use
water on
electricity

Do not move the
vehicle in
danger

Move everyone
away
immediately

Follow the
specialists'
instructions

Important Message: In case of fire or smoke, the priority is evacuation, moving away, and requesting help

Do's and Don'ts When Charging an Electric Vehicle

Correct Practices and Others to Avoid

Don't ✕

- Do not use extension cords 1
- Do not use a damaged charger 2
- Do not touch the cable with a wet hand 3
- Do not let children tamper with it 4
- Do not cover the charger while charging 5
- Do not attempt repairs yourself 6
- Do not use water on electricity 7

Do ✓

- Use an approved, compatible charger 1
- Have the charger installed by a qualified technician 2
- Inspect the cable before use 3
- Charge in a safe, well-ventilated place 4
- Keep equipment away from water and heat 5
- Stop charging if there is a burning smell 6
- Call 999 if there is smoke 7

Interactive Scenarios

A practical application of what you have learned

Scenario 2

The power point is far and you are thinking of using an extension cord

Correct Action: Do not use extension cords; rely on a dedicated, approved charging point

Scenario 1

You notice the charging cable is cracked but still works

Correct Action: Do not use the cable; have it inspected or replaced by a specialist before charging

Scenario 4

A child tries to touch the charging cable

Correct Action: Move the child away immediately, organize the charging area, and prevent tampering with the equipment

Scenario 3

During charging, a burning smell comes from the plug

Correct Action: Stop charging if it is safe, move away, and do not use the charger before inspecting it

Test Your Knowledge

Quick Questions to Assess Your Understanding

Q1: Why must you use an approved charger compatible with the vehicle?

Answer: To reduce the risks of electrical faults and overheating, and to protect the vehicle and home

Q2: Is it advisable to use extension cords to charge vehicles?

Answer: No, they must be avoided; use a dedicated, approved charging point

Q3: What do you do if there is a burning smell during charging?

Answer: Stop charging if it is safe, move away, and do not use the equipment before inspecting it

Q4: What is the action when a fire breaks out during charging?

Answer: Evacuate people, move away, do not touch the cables, and call 999

Thank You

Safe charging of electric vehicles protects the home, the vehicle, and the family

Approved equipment • Installation by a specialist • Inspection before charging • Stay away from water and heat • Call 999

"Safe charging protects your home, your vehicle, and your family"
